# Tolomatic B3S & B3W Electric Rodless Actuators

## The Power to Move Heavy Loads

The B3S and B3W electric rodless actuators have very large moment and load carrying capacities. The sealed recirculating ball bearing design makes it an excellent choice for challenging environments. For even higher capacity (loads up to 3,629 kg.) choose the Dual 180° Carrier and add an auxiliary carrier. Both actuators utilize a patented internal re-circulating ball bearing guidance system that provides extremely long life. These actuators are capable of carrying loads up to 3,629 kg [8,000 lbs].

## A COMPARISON OF SCREW DRIVE ACTUATORS

	TKS	B3S	MXE-S	MXE-P
<b>Features:</b>	Superior rigidity, high moment load capacities	High load and bending moment capacities	Basic guidance and support	High load and bending moment capacities
<b>Load</b> up to: (with options)	0.89 kN [200 lbf]	35.6 kN [8,000 lbf]	4.6 kN [1,040 lbf]	11.5 kN [2,584 lbf]
<b>Thrust</b> up to:	14.5 kN [3,260 lbf]	12 kN [2,700 lbf]	19.1 kN [4,300 lbf]	19.1 kN [4,300 lbf]

# B3S RODLESS SCREW DRIVE ACTUATOR

## ENDURANCE TECHNOLOGY<sup>SM</sup>

Endurance Technology features are designed for maximum durability to provide extended service life.

A Tolomatic Design Principle

The B3S rodless screw-drive electric actuator is designed for carrying moderate to heavy loads with large bending moment capacity. The B3S utilizes an integral recirculating ball bearing guidance system that provides durable performance and extremely long life. Choose from multiple screw technologies for thrust up 12 kN [2,700 lbf]. Built-to-order in stroke lengths up to 4.5 m [179 inches].

# Tolomatic™...MAXIMUM DURABILITY

EXCELLENCE IN MOTION

## SCREW SUPPORT BEARINGS

Unique high thrust bearing assembly design eliminates runout and isolates the linear forces from the drive shaft

## LIGHTWEIGHT ALUMINUM DESIGN

- Black anodized extrusion design is optimized for rigidity and strength
- External switch channels on both sides allow easy placement and adjustment of position indicating switches

## RECIRCULATING BALL BEARING SYSTEM

- Unique design incorporates hardened steel raceways integral to the aluminum extrusion
- Bearing surfaces are adjusted at the factory for optimum preload and smooth performance
- Recirculating ball bearing system provides guidance, high efficiency and durability

## MOTOR ORIENTATION

### YOU CAN CHOOSE:

- Inline option directly couples the driving shaft and is typically a one-piece housing construction for optimum alignment and support of the motor
- Reverse-parallel option minimizes the overall length and offers a belt reduction drive with a 1:1 or 2:1 ratio

## YOUR MOTOR HERE

### YOU CAN CHOOSE:

- Specify the device to be installed and actuator ships with proper mounting hardware
- Specify and ship your device to Tolomatic for factory installation
- Motor or gearbox supplied and installed by Tolomatic

## OPTIONS

## CARRIER OPTIONS

- **AUXILIARY CARRIER** doubles the load capacity and increases pitch and yaw bending moment capacities

- **DUAL 180° CARRIER** doubles the load capacity, increases roll and yaw bending moment capacities and offers a wide mounting platform

## MOUNTING OPTIONS

- **SURFACE MOUNT** two t-slots are integral on the entire underside of the actuator body for direct mounting

- **TUBE SUPPORTS** provide intermediate support of the actuator body throughout long stroke lengths

- **MOUNTING PLATES** provide intermediate support of the actuator body throughout long stroke lengths

## METRIC OPTION

Provides metric tapped holes for mounting of load to carrier and/or actuator to mating surfaces

## SWITCHES

Styles include: reed, hall-effect or triac. Select either 5 m potted cable with flying leads or 150 mm to quick-disconnect coupler with mating 5 m cable

B3S

B3W

# B3W RODLESS BELT-DRIVE ACTUATOR

## ENDURANCE TECHNOLOGY<sup>SM</sup>

A Tolomatic Design Principle

Endurance Technology features are designed for maximum durability to provide extended service life.

The B3W rodless belt-drive electric actuator is designed for carrying moderate to heavy loads at moderate to high speeds with large bending moment capacity. The B3W utilizes an integral recirculating ball bearing guidance system that provides durable performance and extremely long life. The B3W belt-driven actuator features speeds up to 5.1 m/sec [200 in/sec]. Built-to-order in stroke lengths up to 5.3 m [207 inches].

B3S

B3W

## RECIRCULATING BALL BEARING SYSTEM

- Unique design incorporates hardened steel raceways integral to the aluminum extrusion
- Bearing surfaces are adjusted at the factory for optimum preload and smooth performance
- Recirculating ball bearing system provides guidance, high efficiency and durability

## FORMED END CAP WIPERS

Prevent contaminants from entering the sealing band area to protect internal components

## BELT TENSIONING SYSTEM

- Full access to the idle pulley allows ease of adjustment for alignment and tensioning
- Dual adjustment screws and field tensioning kit provide simple maintenance

## LOAD-BEARING CARRIER DESIGN

Load and moments are transmitted directly to the actuator body

## MULTIPLE BELT TECHNOLOGIES

### YOU CAN CHOOSE:

- Polyurethane steel-cord reinforced HTD style belt (standard)
- Polyurethane Kevlar reinforced HTD style belt

## OPTIONS

### CARRIER OPTIONS

- **AUXILIARY CARRIER** doubles the load capacity and increases pitch and yaw bending moment capacities
- **DUAL 180° CARRIER** doubles the load capacity, increases roll and yaw bending moment capacities and offers a wide mounting platform

### MOUNTING OPTIONS

- **SURFACE MOUNT** two t-slots are integral on the entire underside of the actuator body for direct mounting
- **TUBE SUPPORTS** provide intermediate support of the actuator body throughout long stroke lengths
- **MOUNTING PLATES** provide intermediate support of the actuator body throughout long stroke lengths
- **METRIC OPTION**  
Provides metric tapped holes for mounting of load to carrier and of actuator to mating surfaces
- **SWITCHES**  
Styles include: reed, hall-effect or triac. Select either 5 m potted cable with flying leads or 150 mm to quick-disconnect coupler with mating 5 m cable

The Dual 180° carrier requires its own proprietary tube supports and foot mounts. See dimensional information. Breakaway torque will also increase when using the Auxiliary carrier or the Dual 180° carrier options. When ordering, determine working stroke and enter this value into the configuration string. Overall actuator length will automatically be calculated.

**Deflection Considerations:** In applications where substantial Mx or My moments come into play, deflection of the cylinder tube, carrier and supports must be considered. The deflection factors shown in the Load Deflection charts on the following page are based on cylinder mounted with tube supports at minimum recommended spacing. If more rigidity is desired, refer to the Auxiliary or Dual Carrier options.

\*Loads shown in table are at minimum "D" dimension, for ratings with longer "D" dimension see graphs on page B3\_10.

Life of the actuator will vary for each application depending on the combined loads, motion parameters and operating conditions. The load factor ( $L_f$ ) ratios for each application must not exceed a value of 1.5 (see formula at right). Exceeding a load factor of 1.5 will diminish the actuator's rated life.

$$L_f = \frac{M_x}{M_{x_{\max}}} + \frac{M_y}{M_{y_{\max}}} + \frac{M_z}{M_{z_{\max}}} + \frac{F_y}{F_{y_{\max}}} + \frac{F_z}{F_{z_{\max}}} \leq 1.5$$

With combined loads,  $L_f$  must not exceed the value 1.5

### LOAD DEFLECTION

#### DEFLECTION ABOUT X AXIS

#### DEFLECTION TESTING WAS DONE UNDER THESE CRITERIA:

- 1.) Actuator was properly mounted with distance between supports within recommendations (see Support Recommendations below)
- 2.) Deflection was measured from center of carrier as shown ( $M_x = 330\text{mm}$ ,  $M_y = 203\text{mm}$ )

#### DEFLECTION ABOUT Y AXIS

### SUPPORT RECOMMENDATIONS

### FRICITION FORCE

### AUXILIARY CARRIER: BENDING MOMENT AT 'D' DISTANCE

### AUXILIARY DUAL 180° CARRIER: BENDING MOMENT AT 'D' DISTANCE

Rates shown on both graphs were calculated with these assumptions:

- 1.) Coupling between carriers is rigid.

2.) Load is equally distributed between carriers.

3.) Coupling device applies no misalignment loads to carriers.

\* Customer must specify Dimension "D" (Distance between carrier center lines) when ordering.

Life of the actuator will vary for each application depending on the combined loads, motion parameters and operating conditions. The load factor ( $L_F$ ) ratios for each application must not exceed a value of 1.5 (see formula at right). Exceeding a load factor of 1.5 will diminish the actuator's rated life.

$$L_F = \frac{M_x}{M_{x_{\max}}} + \frac{M_y}{M_{y_{\max}}} + \frac{M_z}{M_{z_{\max}}} + \frac{F_y}{F_{y_{\max}}} + \frac{F_z}{F_{z_{\max}}} \leq 1.5$$

With combined loads,  $L_F$  must not exceed the value 1.5

<b>B3S20</b>	2.15	14.38	0.88			

<sup>1</sup>The listed values relating to straightness/flatness are intended for reference purposes only, and not as an engineering standard of absolute tolerance for a given actuator. Appropriate installation is the single most important factor in reducing such deviation, so good engineering practices such as measurement, mapping, etc. must be employed in applications with stringent straightness/flatness requirements.

<sup>2</sup>Heat generated by the motor and drive should be taken into consideration as well as linear velocity and work cycle time. For applications that require operation outside of the recommended temperature range, contact the factory.

<sup>3</sup> Protected against ingress of solid particles greater than .039 in (1mm)

and splashing water.

\* "L" is maximum distance between supports— See the support recommendation graph on page B3\_9.

**LARGE FRAME MOTORS AND SMALLER SIZE ACTUATORS:**  
Cantilevered motors need to be supported, if subjected to continuous rapid reversing duty and/or under dynamic conditions.

## ACME SCREW/NUT COMBINATIONS

### ACME SCREW PV LIMITS

#### METRIC ACME SCREW

#### INCH (US Conventional) ACME SCREW

**A**\* Maximum thrust is the maximum continuous dynamic thrust subject to Thrust x Velocity Limitation.

**PV LIMITS:** Any material which carries a sliding load is limited by heat buildup. The factors that affect heat generation rate in an application are the pressure on the nut in pounds per square inch and the surface velocity in feet per minute. The product of these factors provides a measure of the severity of an application.

$$\left( \frac{P}{\text{Thrust} / (\text{Max. Thrust Rating})} \right) \times \left( \frac{V}{\text{Speed} / (\text{Max. Speed Rating})} \right) \leq 0.1$$

SLOTS OPPOSITE CARRIER  
#3410-1775 [4410-1708]

① DOWEL PINS .003 (0.08mm)

② FOR SNA02 STYLE ONLY

③ SHAFT LENGTH

In-line mounting	0.55 (13.8)
Extended shaft for RP & 23-frame motor	1.99 (50.5)
Extended shaft for RP & 34-frame motor	2.20 (55.9)
Extended shaft for purchases prior to 6/24/02	1.63 (41.4)

④ CAUTION: DO NOT OVERTIGHTEN SWITCH  
HARDWARE WHEN INSTALLING

⑤ NOTE: The scored face of the switch  
indicates the sensing surface and  
must face toward the magnet

⑥ NOTE: Some actuators require switch mounting on a specific side  
of the actuator. Call Tolomatic 1-800-328-2174 for details

⑦ LMI with MRS is 1" (25.4mm) thick  
LMI with all others is 1/2" (12.7mm) thick  
RP, (YMH) all motors is 1/2" (12.7mm) thick

### OPTIONAL TUBE SUPPORTS

### OPTIONAL MOUNTING PLATES

Unless otherwise noted, all dimensions shown are in inches (Dimensions in parenthesis are in millimeters)

# B3S10 Electric Screw Drive Rodless Actuators

## DIMENSIONS Dual 180° Option

① DOWEL PINS .003 (0.08mm)

② FOR SNA02 STYLE ONLY

③ SHAFT LENGTH

In-line mounting	0.55 (13.8)
Extended shaft for RP & 23-frame motor	1.99 (50.5)
Extended shaft for RP & 34-frame motor	2.20 (55.9)
Extended shaft for purchases prior to 6/24/02	1.63 (41.4)

④ CAUTION: DO NOT OVERTIGHTEN SWITCH HARDWARE WHEN INSTALLING

⑤ NOTE: The scored face of the switch indicates the sensing surface and must face toward the magnet

⑥ NOTE: Some actuators require switch mounting on a specific side of the actuator. Call Tolomatic 1-800-328-2174 for details

**!** The listed values relating to straightness/flatness are intended for reference purposes only, and not as an engineering standard of absolute tolerance for a given actuator. Appropriate installation is the single most important factor in reducing such deviation, so good engineering practices such as measurement, mapping, etc. must be employed in applications with stringent straightness/flatness requirements.

<sup>2</sup> Heat generated by the motor and drive should be taken into consideration as well as linear velocity and work cycle time. For applications that require operation outside of the recommended temperature range, contact the factory.

<sup>3</sup> Protected against ingress of solid particles greater than 1 mm (.039 in) and splashing water.

<sup>4</sup> Max. extended length stroke, may require longer lead time, contact Tolomatic.

\*"L" is maximum distance between supports - See Support Recommendations graph pg B3\_9.

**LARGE FRAME MOTORS AND SMALLER SIZE ACTUATORS:** Cantilevered motors need to be supported if subjected to continuous rapid reversing duty and/or under dynamic conditions.

**NOTE:** Zero stroke inertia and weight are for an assembled actuator (including carrier, pulley and belt material) that has zero stroke length. To calculate system inertia use the formula below:

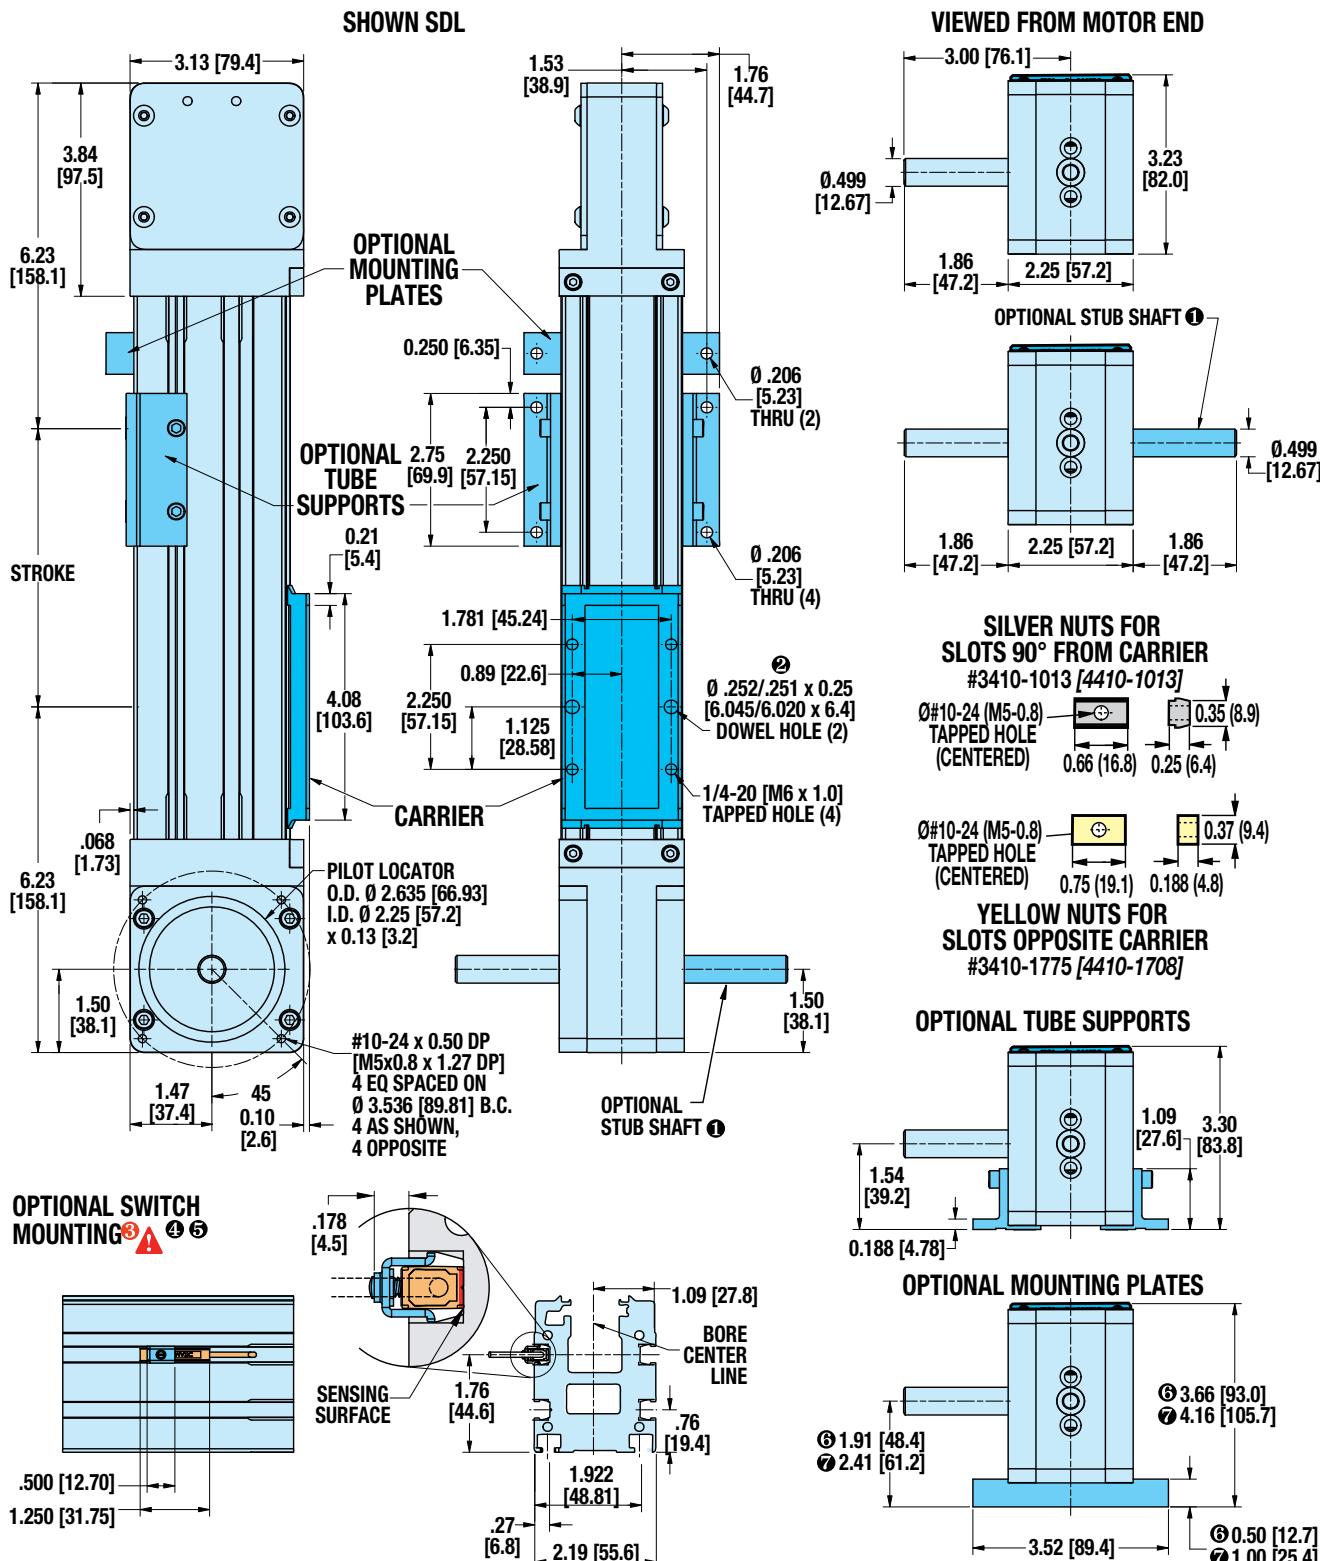

System Inertia = Inertia<sub>(zero stroke)</sub> + [Inertia<sub>(per unit of stroke)</sub> x number of units]  
(For weight calculation substitute inertia with weight in the above formula)

## SWITCHES

There are 10 sensing choices: DC reed, form A (open) or form C (open or closed); AC reed (Triac, open); Hall-effect, sourcing, PNP (open); Hall-effect, sinking, NPN (open); each with either flying leads or QD (quick disconnect). Commonly used to send analog signals to PLC (programmable logic controllers), TLL, CMOS circuit or other controller device. These switches are activated by the actuator's magnet.

Switches contain reverse polarity protection. QD cables are shielded; shield should be terminated at flying lead end.

If necessary to remove factory installed switches, be sure to reinstall on the same side of actuator with scored face of switch toward internal magnet.

## SPECIFICATIONS

actuator selection

# SELECTION GUIDELINES

The process of selecting a load bearing actuator for a given application can be complex. It is highly recommended that you contact Tolomatic or a Tolomatic Distributor for assistance in selecting the best actuator for your application.

The following overview of the selection guidelines are for educational purposes only.

## 1 CHOOSE ACTUATOR SIZE

Choose an actuator that has the (A) thrust, (B) speed and (C) moment load capacity to move the load. **A.** Max Thrust: B3S see page B3\_11; B3W see page B3\_25

**B.** Max. Speed: B3S see critical speed graphs page B3\_13 to B3\_15; All B3W sizes = 200 in/sec (5m/sec). **C.** Moment & Load B3S & B3W see page B3\_8

## 2 COMPARE LOAD TO MAXIMUM LOAD CAPACITIES

Calculate the application load (combination of load mass and forces applied to the carrier) and application bending moments (sum of all moments Mx, My, and Mz applied to the carrier). Be sure to evaluate the magnitude of dynamic inertia moments. When a rigidly attached load mass is accelerated or decelerated, its inertia induces bending moments on the carrier. Careful attention to how the load is decelerated at the end of the stroke is required for extended ac-

tuator performance and application safety. If either load or any of your moments exceed figures indicated in the Moment and Load Capacity table (page B3\_8) for the actuator consider:

- 1) Higher capacity bearing style
- 2) A larger actuator size
- 3) Auxiliary carrier
- 4) External guide system

## 3 CALCULATE LOAD FACTOR LF

For loads with a center of gravity offset from the carrier account for both applied (static) and dynamic loads. The load factor (LF) must not exceed the value of 1.5.

$$LF = \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} + \frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} \leq 1.5$$

If LF does exceed the value of 1.5, consider the four choices listed in step #2.

## 4 ESTABLISH YOUR MOTION PROFILE AND CALCULATE ACCELERATION RATE

Using the application stroke length and maximum carrier velocity (or time to complete the linear motion), establish the motion profile. Select either triangular (accel-decel) or trapezoidal (accel-constant speed-decel) profile. Now calculate the maximum acceleration and deceleration rates of the move.

**For the B3S** Acceleration/deceleration should not exceed critical speed (page B3\_13) for the screw/nut combination chosen. **For the B3W** acceleration/deceleration should not exceed 1200 in/sec<sup>2</sup> (30.48 m/sec<sup>2</sup>). Also, do not exceed safe rates of dynamic inertia moments determined in step #3.

## 5 SELECT THE LEAD SCREW (B3S ONLY)

Based on the application requirements for accuracy, backlash, quiet operation, life, etc. select the appropriate lead screw type (Acme screw with a solid nut or ball screw with a standard or anti-backlash nut) and the pitch (lead). For additional information on screw selection, consult "Which Screw? Picking the Right Technology" (#9900-4644) available at [www.tolomatic.com](http://www.tolomatic.com).

## 8 CONSIDER OPTIONS

- Choose metric or inch (US Conventional) load mounting. (When ordering use **SK** for inch)
- Switches - Reed, Solid State PNP or NPN, all available normally open or normally closed

Use the Tolomatic Sizing & Selection Software or call Tolomatic at **1-800-328-2174**

## 6 SELECT MOTOR (GEARHEAD IF NECESSARY) AND DRIVE

To help select a motor and drive, use the sizing equations located in the Engineering Resources section [ENGR\_] of the Tolomatic Electric Products Catalog (#3600-4609) to calculate the application thrust and torque requirements. Refer to Motor sections to determine the motor and drive.

[sizeit.tolomatic.com](http://sizeit.tolomatic.com)  
for fast, accurate  
actuator selection

## 7 DETERMINE TUBE SUPPORT/ MOUNTING PLATE/T-NUT REQUIREMENTS

- Consult the Tube Support Requirements graph for the model selected (page B3\_9)
- Cross reference the application load and maximum distance between supports
- Select the appropriate number of tube supports, T-nuts or mounting plates and requirements for motor and adapter clearance.

# B3S Electric Screw Drive Rodless Actuators

## ORDERING

### BASE MODEL

**B3S 20 D BN L02 SK 36 LMI**

#### MODEL TYPE

B3S B3S Screw Drive Rodless Actuator

#### SIZE

10, 15, 20

#### DUAL 180° CARRIER

D Dual 180° Carrier

#### NUT/SCREW CONFIGURATION

INCH MODELS (US Conventional)	METRIC MODELS†
SOLID NUT / PITCH (turn/in)	SOLID NUT / LEAD (mm/turn)
ØSN01	ØSN25
ØSN02, SNA02	ØSN12
SN05	
ØSN (Solid Nut) not available for 20 Size	
BALL NUT / PITCH (turn/in)	BALL NUT / LEAD (turn/in)
BN02, BNL02	BNM10
BN05, BNL05	BN05, BNL05
BN08, BNL08	BN08, BNL08

† The metric version provides metric tapped holes for mounting of the load to the carrier and of the actuator to mounting surfaces

#### STROKE LENGTH & MOUNTING TYPE

**SK** \_\_\_\_ Stroke, enter desired stroke length in **inches**

**SM†** \_\_\_\_ Stroke, enter desired stroke length in **millimeters**

**NOTE:** Actuator mounting threads and mounting fasteners will be either inch or metric; depending on how stroke length is indicated

**SK**=inch mounting

**SM**= metric mounting

⚠ Not all codes listed are compatible with all options.

Use Tolomatic Sizing Software to determine available options and accessories based on your application requirements.

### OPTIONS

**DC18 TS2 BM2 TN8**

#### MOTOR MOUNTING / REDUCTIONS

(must choose one)

**LMI** In-Line mounting

**LME23** Ext. shaft for RP & 23 frame motor

**LME34** Ext. shaft for RP & 34 frame motor

**\*LMX** Extended shaft - old style (see note)

\*For replacement actuators with extended motor shafts purchased prior to 6/24/02, use the LMX configuration code.

A motor size and code must be selected when specifying a reverse-parallel mounting configuration.

**RPL1** 1:1 Reverse-Parallel mount left

**RPR1** 1:1 Reverse-Parallel mount right

**RPB1** 1:1 Reverse-Parallel mount bottom

**RPT1** 1:1 Reverse-Parallel mount top

**RPL2** 2:1 Reverse-Parallel mount left

**RPR2** 2:1 Reverse-Parallel mount right

**RPB2** 2:1 Reverse-Parallel mount bottom

**RPT2** 2:1 Reverse-Parallel mount top

#### SWITCHES

(Quantity desired follows product code)

**RM**\_ Reed Switch (Form A) with 5-meter lead/QD (Quick-disconnect)

**RT**\_ Reed Switch (Form A) with 5-m lead

**BM**\_ Reed Switch (Form C) with 5-meter lead/QD

**BT**\_ Reed Switch (Form C) with 5-m lead

**KM**\_ Hall-effect Sinking Switch with 5-meter lead/QD

**KT**\_ Hall-effect Sinking Switch w/ 5-m lead

**TM**\_ Hall-effect Sourcing Switch with 5-meter lead/QD

**TT**\_ Hall-effect Sourcing Switch with 5-meter lead

**CM**\_ TRIAC Switch with 5-meter lead/QD

**CT**\_ TRIAC Switch with 5-meter lead

#### T-NUTS

**TN** \_ Additional T-Nuts and quantity

#### FOOD GRADE LUBRICATION

**LUB**\_ Grease, Food/Drug

"YOUR MOTOR HERE." MADE-TO-ORDER  
MOTOR MOUNTS. FAST DELIVERY.

• Select a high-performance Tolomatic electric actuator and we'll provide a motor-specific interface for your motor. With our online database, you can select from over 60 motor manufacturers and hundreds of models.

Visit [www.tolomatic.com/ymh](http://www.tolomatic.com/ymh) to find your motor/actuator match!

#### SUPPORTS AND MOUNTING PLATES

(both may be selected)

**TS** \_ Tube Supports plus quantity desired

\*\***MP**\_ Mounting Plates plus quantity desired

\*\*Mounting plates are not available on B3SD Dual 180° models.

#### FIELD RETROFIT KITS

# B3W Electric Belt Drive Rodless Actuators

## ORDERING

**BASE MODEL** **B3W 20 D BWS40 SK56 SDTR DC18 TS2 BM2 TN16**

**MODEL TYPE**  
B3W B3W Series Belt Drive

**SIZE**  
10, 15, 20

**DUAL 180° CARRIER**  
D Dual 180° Carrier

**BELT MATERIAL AND WIDTH**  
**BWS18** 18mm Polyurethane Steel belt (B3W10)  
**BWS30** 30mm Polyurethane Steel belt (B3W15)  
**BWS40** 40mm Polyurethane Steel belt (B3W20)

**STROKE LENGTH & MOUNTING TYPE**  
**SK** Stroke, enter desired stroke length in **inches**  
**SM†** Stroke, enter desired stroke length in **millimeters**  
**NOTE:** Actuator mounting threads and mounting fasteners will be either inch or metric; depending on how stroke length is indicated  
**SK**=inch mounting  
**SM**= metric mounting

† The metric version provides metric tapped holes for mounting of the load to the carrier and of the actuator to mounting surfaces

**MOTOR MOUNTING / REDUCTIONS**  
(must choose one)

**SDL, SDR\*** Direct Drive on left  
**SDR, SDRB\*** Direct Drive on right

**A** A motor size and code must be selected when specifying a 3:1 reduction.

**SDTL, SDTLB\*** 3:1 Reduction on top left  
**SDTR, SDTRB\*** 3:1 Reduction on top right  
**SDBL, SDBLB\*** 3:1 Reduction on bottom left  
**SDBR, SDBRB\*** 3:1 Reduction on bottom right

\* For Dual Stub Shaft option

### AUXILIARY CARRIER

**DC** \_Auxiliary Carrier, then center-to-center spacing desired in inches (**SK**) or millimeters (**SM**).

(Same unit of measure as stroke length is required) Center-to-center spacing between carriers adds to overall length of the actuator, this distance will not be subtracted from stroke length specified in the previous step.
