# BCS RODLESS SCREW DRIVE ACTUATORS

**ENDURANCE TECHNOLOGY**<sup>SM</sup> *Endurance Technology features are designed for maximum durability to provide extended service life.*  
A Tolomatic Design Principle

This rodless style actuator is designed for carrying light to moderate loads at an economical price. Based upon our BC2 pneumatic band cylinder, it utilizes a guidance system consisting of an adjustable carrier bracket with two solid bearing rods that transmit the load to the actuator body for superior load support. Built-to-order in stroke lengths up to 3 m [120 inches] with multiple screw options available.

## ADJUSTABLE CARRIER BRACKET

- Allows for easy adjustment and replacement of the load bearings throughout the life of the actuator
- Allows customizing the bearing tension and free play of the carrier to meet the applications requirements

## FORMED END CAP WIPERS

Prevent contaminants from entering the sealing band area to protect internal components

## EXTERNAL BUMPERS

Bumpers protect the screw and nut assembly from damage at end of stroke

## YOUR MOTOR HERE

### YOU CAN CHOOSE:

- Motor or gearbox supplied and installed by Tolomatic
- Specify the device to be installed and actuator ships with proper mounting hardware
- Specify and ship your device to Tolomatic for factory installation  
LMI (inline) motor mount only

## MOTOR ORIENTATION

### YOU CAN CHOOSE:

- Inline option directly couples the driving shafts and is a one-piece housing construction for optimum alignment and support of the motor
- Reverse-parallel option minimizes the overall length and offers a 1:1 or 2:1 belt ratio

## STAINLESS STEEL SEALING BAND

- Prevents contaminants from entering the screw and nut area for prolonged life
- Fatigue resistant stainless steel bands are specifically made to offer long life and will not elongate

## LOAD-BEARING CARRIER DESIGN

- Engineered resin bearings provide guidance, low friction loss and long life
- Load and moments are transmitted directly to the actuator body

## LIGHTWEIGHT ALUMINUM DESIGN

- Black anodized extrusion design is optimized for rigidity and strength
- External switch channels on both sides allow easy placement and adjustment of position indicating switches

## SCREW SUPPORT BEARINGS

High thrust bearing assembly design isolates the motor from axial forces

## MULTIPLE SCREW TECHNOLOGIES

### YOU CAN CHOOSE:

- Solid nuts of engineered resins offer quiet performance at the lowest cost; anti-backlash available
- Ball nuts offer positioning accuracy and repeatability with longer life; low-backlash available

## OPTIONS

### CARRIER OPTIONS

☐ **AUXILIARY CARRIER** doubles the load capacity and increases bending moments capacity significantly

☐ **FLOATING MOUNT** compensates for non-parallelism between the actuator and an external support or guidance system

### MOUNTING OPTIONS

☐ **SURFACE MOUNT** tapped holes are provided on the underside of the actuator heads, as a standard feature, for direct mounting

☐ **TUBE SUPPORTS** provide intermediate support of the actuator body throughout long stroke lengths

### METRIC OPTION

Provides metric tapped holes for mounting of load to carrier and of actuator to mating surfaces

### SWITCHES

Styles include: reed, hall-effect or triac. Select either 5 m potted cable with flying leads or 150 mm to quick-disconnect coupler with mating 5 m cable.

actuator selection

## ACME SCREW/NUT COMBINATIONS

### ACME SCREW CRITICAL SPEED CAPACITIES

\* Maximum thrust is the maximum continuous dynamic thrust subject to Thrust x Velocity limitation.

Dotted lines represent maximum stroke for screw selections.

For Screw PV limits, refer to the individual charts located in the technical section for each actuator body size.

SNA	Anti-backlash Solid Nut

### PV LIMITS, ACME SCREWS

\* Maximum thrust is the maximum continuous dynamic thrust subject to Thrust x Velocity limitation.

**PV LIMITS:** Any material which carries a sliding load is limited by heat buildup. The factors that affect heat generation rate in an application are the pressure on the nut in pounds per square inch and the surface velocity in feet per minute. The product of these factors provides a measure of the severity of an application.

$$\left( \frac{P}{(\text{Max. Thrust Rating})} \right) \times \left( \frac{V}{(\text{Max. Speed Rating})} \right) \leq 0.1$$

BCS15	1.94	6.61	0.392	40 - 130	44
BCS20	2.81	14.59	0.666	40 - 130	44

\* Heat generated by the motor and drive should be taken into consideration as well as linear velocity and work cycle time. For applications that require operation outside of the recommended temperature range, contact Tolomatic.

\*\* Protected against ingress of solid particles greater than 1mm (.039 in) and splashing water

LARGE FRAME MOTORS AND SMALLER SIZE ACTUATORS: Cantilevered motors need to be supported, if subjected to continuous rapid reversing duty and/or under dynamic conditions.

### FRICTION FORCE

### BCS CARRIER BRACKET BOLT ADJUSTMENT (ALL SIZES)

BCS carrier bracket adjustment bolts should be adjusted to suit each individual application, depending on the degree of rigidity required. A good starting point is to tighten the nut on the bolt until there is no lateral movement of the bolt. Then,

equally tighten each nut on the carrier bolt while moving the carrier by hand along the length of the stroke. When all lateral play in the carrier is eliminated and free movement along the length of the stroke is maintained, your carrier bracket is adjusted properly. Some applications may require fine tuning of this adjustment to gain more lateral play or a higher degree of rigidity. In demanding applications, carrier adjustments should be done periodically.

\* CAUTION:

Over-tightening increases drive torque of motor and drive.

	Mz Moment (Yaw)	*(N-m : lb-in)	32.4	164.1	274.6	287	1453	2430
	Fz Moment (Lateral)	(N : lb)	534	1602	2670	120	360	600
	Minimum Dimension 'D'	(mm : in)	129.5	165.0	206.0	5.10	6.50	8.10

Please see BCS Carrier Bracket Bolt Adjustment on page BCS\_6

Breakaway torque will increase when using the Auxiliary carrier option. When ordering, determine your working stroke and enter this value into the configuration string. Overall actuator length will automatically be calculated.

\*Loads shown in table are at minimum "D" dimension, for ratings with longer "D" dimension see graph below.

### AUXILIARY CARRIER: BENDING MOMENT AT 'D' DISTANCE

Rates shown on charts were calculated with these assumptions:

- 1.) Coupling between carriers is rigid.
- 2.) Load is equally distributed between carriers.

3.) Coupling device applies no misalignment loads to carriers.

\* Customer must specify Dimension "D" (Distance between carrier center lines) in configuration string.

## SWITCHES

There are 10 sensing choices: DC reed, form A (open) or form C (open or closed); AC reed (Triac, open); Hall-effect, sourcing, PNP (open); Hall-effect, sinking, NPN (open); each with either flying leads or QD (quick disconnect). Commonly used to send analog signals to PLC (programmable logic controllers), TLL, CMOS circuit or other controller device. These switches are activated by the actuator's magnet.

Switches contain reverse polarity protection. QD cables are shielded; shield should be terminated at flying lead end.

If necessary to remove factory installed switches, be sure to reinstall on the same side of actuator with scored face of switch toward internal magnet.

OFF TRIP POINT	—				—		40 Gauss minimum			
**POWER RATING (WATTS)	10.0 §		3.0 §§		10.0		5.0			
VOLTAGE DROP	2.6 V typical at 100 mA		NA		—		—			
RESISTANCE	0.1 Ω Initial (Max.)				—		—			
CURRENT CONSUMPTION	—				1 Amp at 86°F [30°C]	0.5 Amp at 140°F [60°C]	200 mA at 25 Vdc			
FREQUENCY	—				47 - 63 Hz		—			
CABLE MIN. BEND RADIUS	STATIC	0.630" [16mm]								
	DYNAMIC	Not Recommended								

**CAUTION: DO NOT OVER TIGHTEN SWITCH HARDWARE WHEN INSTALLING!**

**\*\* WARNING:** Do not exceed power rating (Watt = Voltage X Amperage). Permanent damage to sensor will occur.

\*QD = Quick Disconnect; Male coupler is located 6" [152mm] from sensor,  
Female coupler to flying lead distance is 197" [5m] also see Cable Shielding specification above

**REPLACEMENT OF QD SWITCHES MANUFACTURED BEFORE JULY 1, 1997:** It will be necessary to replace or rewire the female end coupler.

**Reed Switch Life Expectancy:** Up to 200,000,000 cycles (depending on load current, duty cycle and environmental conditions)

†Shielded from the female quick disconnect coupler to the flying leads. Shield should be terminated at flying lead end.

§ Maximum current 500mA (not to exceed 10VA) Refer to Temperature vs. Current graph and Voltage Derating graph

Assign to Moves: ☐ Extend ☐ Retract

# SELECTION GUIDELINES

The process of selecting a load bearing actuator for a given application can be complex. It is highly recommended that you contact Tolomatic or a Tolomatic Distributor for assistance in selecting the best actuator for your application. The following overview of the selection guidelines are for educational purposes only.

## 1 CHOOSE ACTUATOR SIZE

Choose an actuator that has the thrust, speed and moment load capacity to move the load. Use the Critical Speed graphs (page BCS\_4-5) for the screw and the Moment and Load Capacity table (pg. BCS\_9) for the actuator.

## 2 COMPARE LOAD TO MAXIMUM LOAD CAPACITIES

Calculate the application load (combination of load mass and forces applied to the carrier) and application bending moments (sum of all moments  $M_x$ ,  $M_y$ , and  $M_z$  applied to the carrier). Be sure to evaluate the magnitude of dynamic inertia moments. When a rigidly attached load mass is accelerated or decelerated, its inertia induces bending moments on the carrier. Careful attention to how the load is decelerated at the end of the stroke is required for extended actuator performance and application safety. If either load or any of your moments exceed figures indicated in the Moment and Load Capacity table (pg. BCS\_9) for the actuator consider:

- 1) Higher capacity bearing style
- 2) A larger actuator size
- 3) Auxiliary carrier
- 4) External guide system

## 3 CALCULATE LOAD FACTOR LF

For loads with a center of gravity offset from the carrier account for both applied (static) and dynamic loads. The load factor (LF) must not exceed the value of 1.

$$L_f = \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} + \frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} \leq 1$$

If  $L_f$  does exceed the value of 1, consider the four choices listed in step #2.

## 4 ESTABLISH YOUR MOTION PROFILE AND CALCULATE ACCELERATION RATE

Using the application stroke length and maximum carrier velocity (or time to complete the linear motion), establish the motion profile. Select either triangular (accel-decel) or trapezoidal (accel-constant speed-decel) profile. Now calculate the maximum acceleration and deceleration rates of the move. Speed should not exceed critical speed value as shown on graphs (page BCS\_4-5) for the screw/nut combination cho-

### SPEED FACTOR

FOR APPLICATIONS WITH HIGH SPEED OR SIGNIFICANT SHOCK AND VIBRATION: Calculated values of loads and bending moments must be increased by speed factor from the graph below to obtain full rated life of profiled rail bearing system.

sen. Also, do not exceed safe rates of dynamic inertia moments determined in step #3.

## 5 SELECT THE LEAD SCREW

Based on the application requirements for accuracy, backlash, quiet operation, life, etc. select the appropriate lead screw type (Acme screw with a solid nut or ball screw with a standard or anti-backlash nut) and the pitch (lead). For additional information on screw selection, consult "Which Screw? Picking the Right Technology" (#9900-4644) available at [www.tolomatic.com](http://www.tolomatic.com).

## 6 SELECT MOTOR (GEARHEAD IF NECESSARY) AND DRIVE

To help select a motor and drive, use the sizing equations located in the Engineering Resources section [ENGR] to calculate the application thrust and torque requirements. Refer to Motor sections [MRV] & [MRS] to determine the motor and drive.

## 7 DETERMINE TUBE SUPPORT/ MOUNTING PLATE REQUIREMENTS

- Consult the Support Recommendations graph for the model selected (page BCS\_8)
- Cross reference the application load and maximum distance between supports
- Select the appropriate number of tube supports, and mounting plates if required for motor and adapter clearance.

# 8 CONSIDER OPTIONS

- Choose metric or inch (US conventional) load mounting.
- Switches - Reed, Solid State PNP or NPN, all available normally open or normally closed
- **[FIL]** Floating mount bracket - used when lack of parallelism occurs between the actuator and an externally guided and supported load

purchase

## [S] SOLID BEARING 2:1 RULE

For applications using **[BCS]** actuator, binding or interrupted motion may occur if the load offset is equal to or greater than twice the bearing length (1X).

LOAD OFFSET is defined as: the distance from the applied force (or the load center of gravity) to the centerline of the carrier.

If the load offset cannot be changed consider:

- 1.) Higher capacity bearing style
- 2.) Larger Bore Cylinder
- 3.) Auxiliary Carrier
- 4.) Add External Guides

# BCS Rodless Screw Drive Actuators

## ORDERING

### BASE MODEL SPECIFICATIONS

**BCS 20 BN02 SK45 RPL1**

#### MODEL TYPE

**BCS** BCS Series US Conventional Screw Drive

#### SIZE

**10, 15, 20**

#### NUT/SCREW CONFIGURATION

INCH MODELS (US Conventional)	METRIC MODELS†
SOLID NUT / PITCH (turn/in)	SOLID NUT / LEAD (mm/turn)
SN01 SN02 SNA02 SN05	SN12
BALL NUT / PITCH (turn/in)	BALL NUT / LEAD (turn/in)
BN02 BNL02 BN05 BNL05 BN08 BNL08	BN05 BNL05 BN08 BNL08

† The metric version provides metric tapped holes for mounting of the load to the carrier and of the actuator to mounting surfaces

#### STROKE LENGTH & MOUNTING TYPE

**SK** \_\_ . \_\_ Stroke, enter desired stroke length in inches  
**SM†** \_\_ . \_\_ Stroke, enter desired stroke length in millimeters

**NOTE:** Actuator mounting threads and mounting fasteners will be either inch or metric; depending on how stroke length is indicated.

**SK** = inch mounting  
**SM** = metric mounting

† The metric version provides metric tapped holes for mounting of the load to the carrier and of the actuator to mounting surfaces

### OPTIONS SPECIFICATIONS

**DC18 KT2 MP2**

#### MOTOR MOUNTING / REDUCTIONS

(must choose one)

**LMI** In-Line mounting  
**LME23** Ext. shaft for RP & 23 frame motor  
**LME34** Ext. shaft for RP & 34 frame motor  
**\*\*LMX** Extended shaft - old style (see note)  
**\*\*For replacement actuators with extended motor shafts purchased prior to 6/24/02 use LMX**

A motor size and code must be selected when specifying a reverse-parallel mounting configuration.

**RPL1** 1:1 Reverse-Parallel mount left  
**RPR1** 1:1 Reverse-Parallel mount right  
**RPB1** 1:1 Reverse-Parallel mount bottom  
**RPT1** 1:1 Reverse-Parallel mount top  
**RPL2** 2:1 Reverse-Parallel mount left  
**RPR2** 2:1 Reverse-Parallel mount right  
**RPB2** 2:1 Reverse-Parallel mount bottom  
**RPT2** 2:1 Reverse-Parallel mount top

#### AUXILIARY CARRIER

**DC** \_\_ Auxiliary Carrier, then center-to-center spacing desired in inches (**SK**) or millimeters (**SM**).

(Same unit of measure as stroke length is required)  
 Center-to-center spacing between carriers adds to overall length of the actuator, this distance will not be subtracted from stroke length specified in the previous step.

#### SWITCHES

**RM** \_ Reed Switch (Form A) with 5-meter lead/QD (quick-disconnect), & quantity  
**RT** \_ Reed Switch (Form A) with 5-meter lead, and quantity desired  
**BM** \_ Reed Switch (Form C) with 5-meter lead/QD, and quantity desired  
**BT** \_ Reed Switch (Form C) with 5-meter lead, and quantity desired  
**KM** \_ Hall-effect Sinking Switch with 5-meter lead/QD, and quantity desired  
**KT** \_ Hall-effect Sinking Switch with 5-meter lead, and quantity desired  
**TM** \_ Hall-effect Sourcing Switch with 5-meter lead/QD, and quantity desired  
**TT** \_ Hall-effect Sourcing Switch with 5-meter lead, and quantity desired  
**CM** \_ TRIAC Switch with 5-meter lead/QD, and quantity desired  
**CT** \_ TRIAC Switch with 5-meter lead, and quantity desired

#### SUPPORTS AND MOUNTING PLATES

(both may be selected)

**TS** \_ Tube Supports plus quantity desired  
**MP2** Mounting Plates, 2 in kit

#### FLOATING MOUNT

**FL** \_ Floating Mount Bracket

#### FOOD GRADE LUBRICATION

**LUB** \_ Grease, Food/Drug

NOTE: Brakes mounted on reverse parallel motor mounts (especially in vertically positioned actuators) will not prevent back driving of the screw and the load falling under gravity in the event of a timing belt failure. An inline motor mount with a fail-safe brake mounted directly to the actuator shaft or a special geared or thru-shaft reverse parallel construction should be considered if a brake is required in a safety critical application. Contact Tolomatic for alternate reverse parallel brake mounting options.

Gearheads may be used with reverse parallel motor mounts. However, the torque on the belt and internal RP components must remain below the capabilities of the assembly to prevent belt slipping or premature failure. Contact Tolomatic for additional information if required.

**Not all codes listed are compatible with all options.**

Use the Sizing Software to determine available options and accessories based on your application requirements.

#### FIELD RETROFIT KITS

ITEM	BCS10_SK	BCS15_SK	BCS20_SK	BCS10_SM	BCS15_SM	BCS20_SM
