**LINEAR SOLUTIONS MADE EASY**

# THE MXE ELECTRIC ACTUATOR – DESIGNED TO OUTLAST EVERY RODLESS ACTUATOR ON THE MARKET

The MXE electric actuator is exactly what you expect from the industry's number one rodless supplier. Designed with our exclusive **ENDURANCE TECHNOLOGY<sup>SM</sup>** features, the MX delivers superior performance to meet the most demanding applications. Nobody knows rodless like Tolomatic, and the MX proves it.

- **DURABLE BEARINGS.** Two bearing choices to match your application needs. Solid bearing design optimizes stress distribution for optimal performance. Profiled rail design uses recirculating ball technology to reduce friction and extend actuator life.
- **DURABLE BANDS.** Stainless steel bands are stronger and will not elongate like elastomer (non-metallic) bands, providing a reliable seal over the life of the actuator.

## **S**-SOLID BEARING

- Large bearing surface contact area optimizes stress distribution on bearing for long service life
- Large carrier mounting pattern for more load stability and compatibility with existing BCS applications
- Engineered bearing material does not require additional lubrication
- Solid bearings are field replaceable

## **P**-PROFILED RAIL

- Recirculating ball bearings with reduced friction for reliable service life
- High load and bending moment capacities
- Low profile to fit your application
- High precision bearings feature smooth, low breakaway motion

**Our broad line of MX products includes electric actuators (belt-drive & screw-drive) and pneumatic rodless cylinders.**

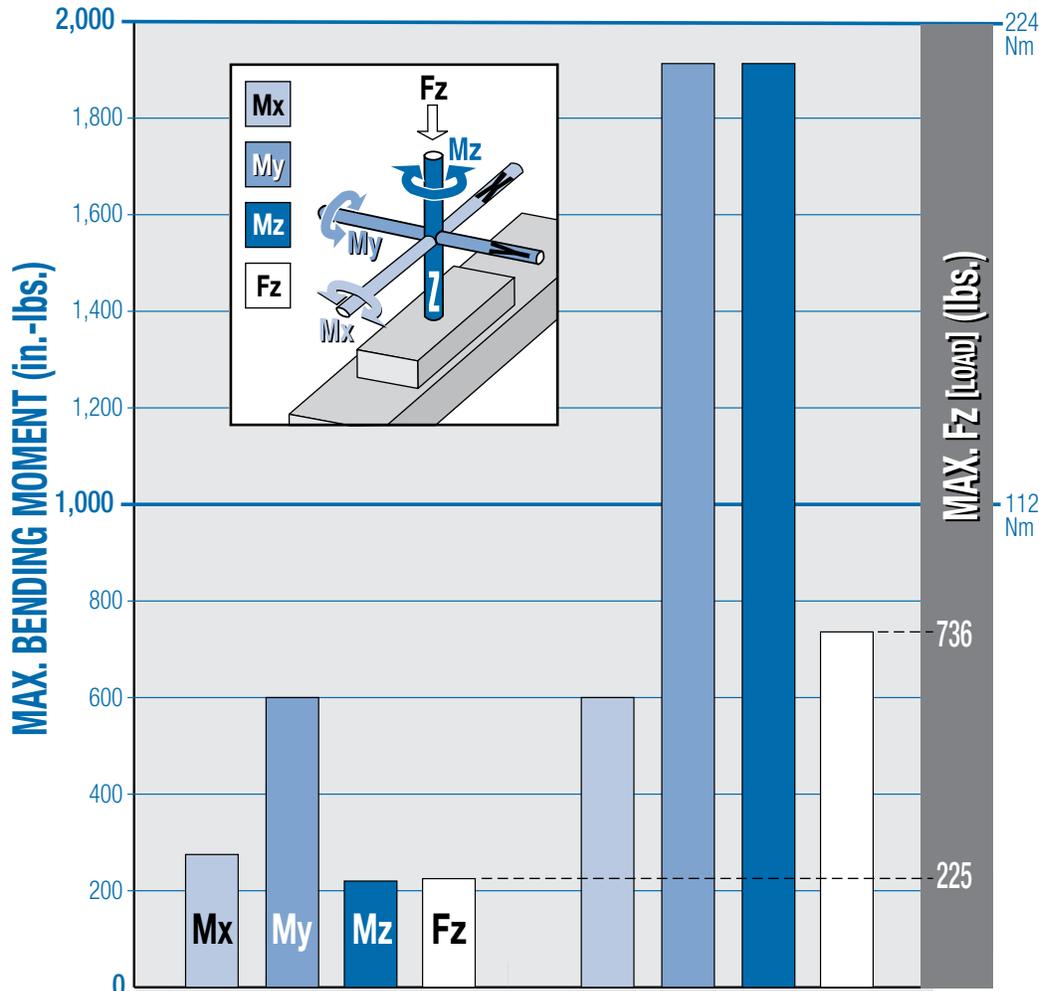

**World class product performance, fifteen days built-to-order and legendary customer service . . . what you expect from the leader . . . Tolomatic!**

# SELECT THE PERFORMANCE YOU NEED

Choose from: • Two Bearing Models • Six Actuator Sizes • Built to Your Specified Stroke Length

# MXE-S SOLID BEARING SCREW ACTUATOR

**ENDURANCE TECHNOLOGY** SM *Endurance Technology features are designed for maximum durability to provide extended service life.*

A Tolomatic Design Principle

The MXE-S rodless electric screw-drive actuator is designed for applications requiring moderate load carrying and guidance. The MXE-S actuator utilizes two field replaceable solid bearings that optimize stress distribution for optimal performance. Built-to-order in stroke lengths up to 3.4m (134").

**Tolomatic**... MAXIMUM DURABILITY  
EXCELLENCE IN MOTION

## LIGHTWEIGHT ALUMINUM DESIGN

Clear anodized extrusion design is optimized for rigidity and strength

## STAINLESS STEEL BAND

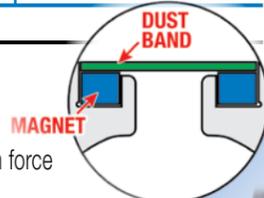

Exterior dust band made of fatigue resistant, durable, flexible and corrosion resistant stainless steel

## RETAINED DUST BAND

Retained dust band keeps contaminants from entering the actuator interior, protecting components for reduced maintenance and increased uptime

## NON-WEAR BAND RETENTION

- Magnetically retained band is not subject to wear as are mechanically retained systems
- Immediate band engagement and release results in less drag on carrier for lower friction force during initial carrier movement

## LARGE FLEXIBLE MOUNTING PATTERN

- Carrier gives more load stability
- Compatibility with existing BCS applications
- More fastening options

## DUST WIPER

- Formed end cap and side dust wipers keep contaminants from entering the actuator's internal area

## INCH OR METRIC MOUNTING

Your choice of inch (US standard) or metric mounting to the carrier

## YOUR MOTOR HERE

### YOU CAN CHOOSE:

- Motor or gearbox supplied and installed by Tolomatic
- Specify the device to be installed and actuator ships with proper mounting hardware - MXE is a "Your Motor Here" actuator for easy in-line motor installation. Check our website ([www.tolomatic.com/ymh](http://www.tolomatic.com/ymh)) for complete YMH information
- Specify and ship your device to Tolomatic for factory installation

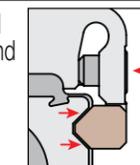

## MOTOR ORIENTATION

### YOU CAN CHOOSE:

- Inline option directly couples the driving shafts and is a one-piece housing construction for optimum alignment and support of the motor
- Reverse-parallel option minimizes the overall length and offers a 1:1 or 2:1 belt ratio

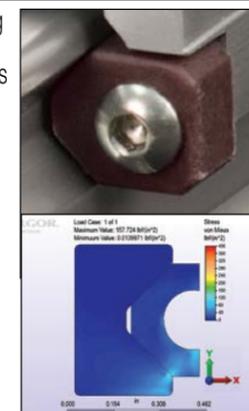

## NON-BINDING BEARING ARMS

Bearings are tensioned indirectly, providing bind free adjustment

## TRAPEZOIDAL BEARINGS

- Trapezoidal design maximizes bearing surface area for less pressure on bearing surfaces; less pressure results in less wear
- Engineered bearing material has low static and dynamic friction with low wear properties for long lasting, smooth operation
- Bearings are field replaceable for extended service life

## MULTIPLE SCREW TECHNOLOGIES

### YOU CAN CHOOSE:

- Solid nuts of engineered resins for quiet performance at the lowest cost - 5 choices
- Ball nuts offer positioning accuracy and repeatability with longer life, low-backlash available - 3 choices

## INTERNAL MAGNETS

Standard feature that allows sensor installation on the open side or bottom of the extrusion

NOTE: Boxed letters indicate ordering codes

## OPTIONS

### AUXILIARY CARRIER **DC**

- 2X higher Fz (load) capacity
- High bending moment capacity

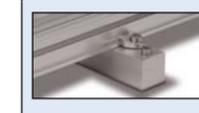

### FLOATING MOUNT **FL**

- Compensates for non-parallelism between MX actuator and externally guided load

### TUBE CLAMPS **TC**

- Used for intermediate support to retain low profile
- Drop-in, adjustable mounting locations (MXE16 uses T-nuts with mounting plates)

### MOUNTING PLATES **MP**

- To provide clearance for motor and mount
- Use in conjunction with tube clamps

### SWITCHES

- Wide variety of sensing choices: Reed, Solid State PNP or NPN, all available normally open or normally closed
- Flush mount, drop-in installation
- Bright LEDs, power & signal indication
- CE rated, RoHS compliant

# MXE-P PROFILED RAIL SCREW ACTUATOR

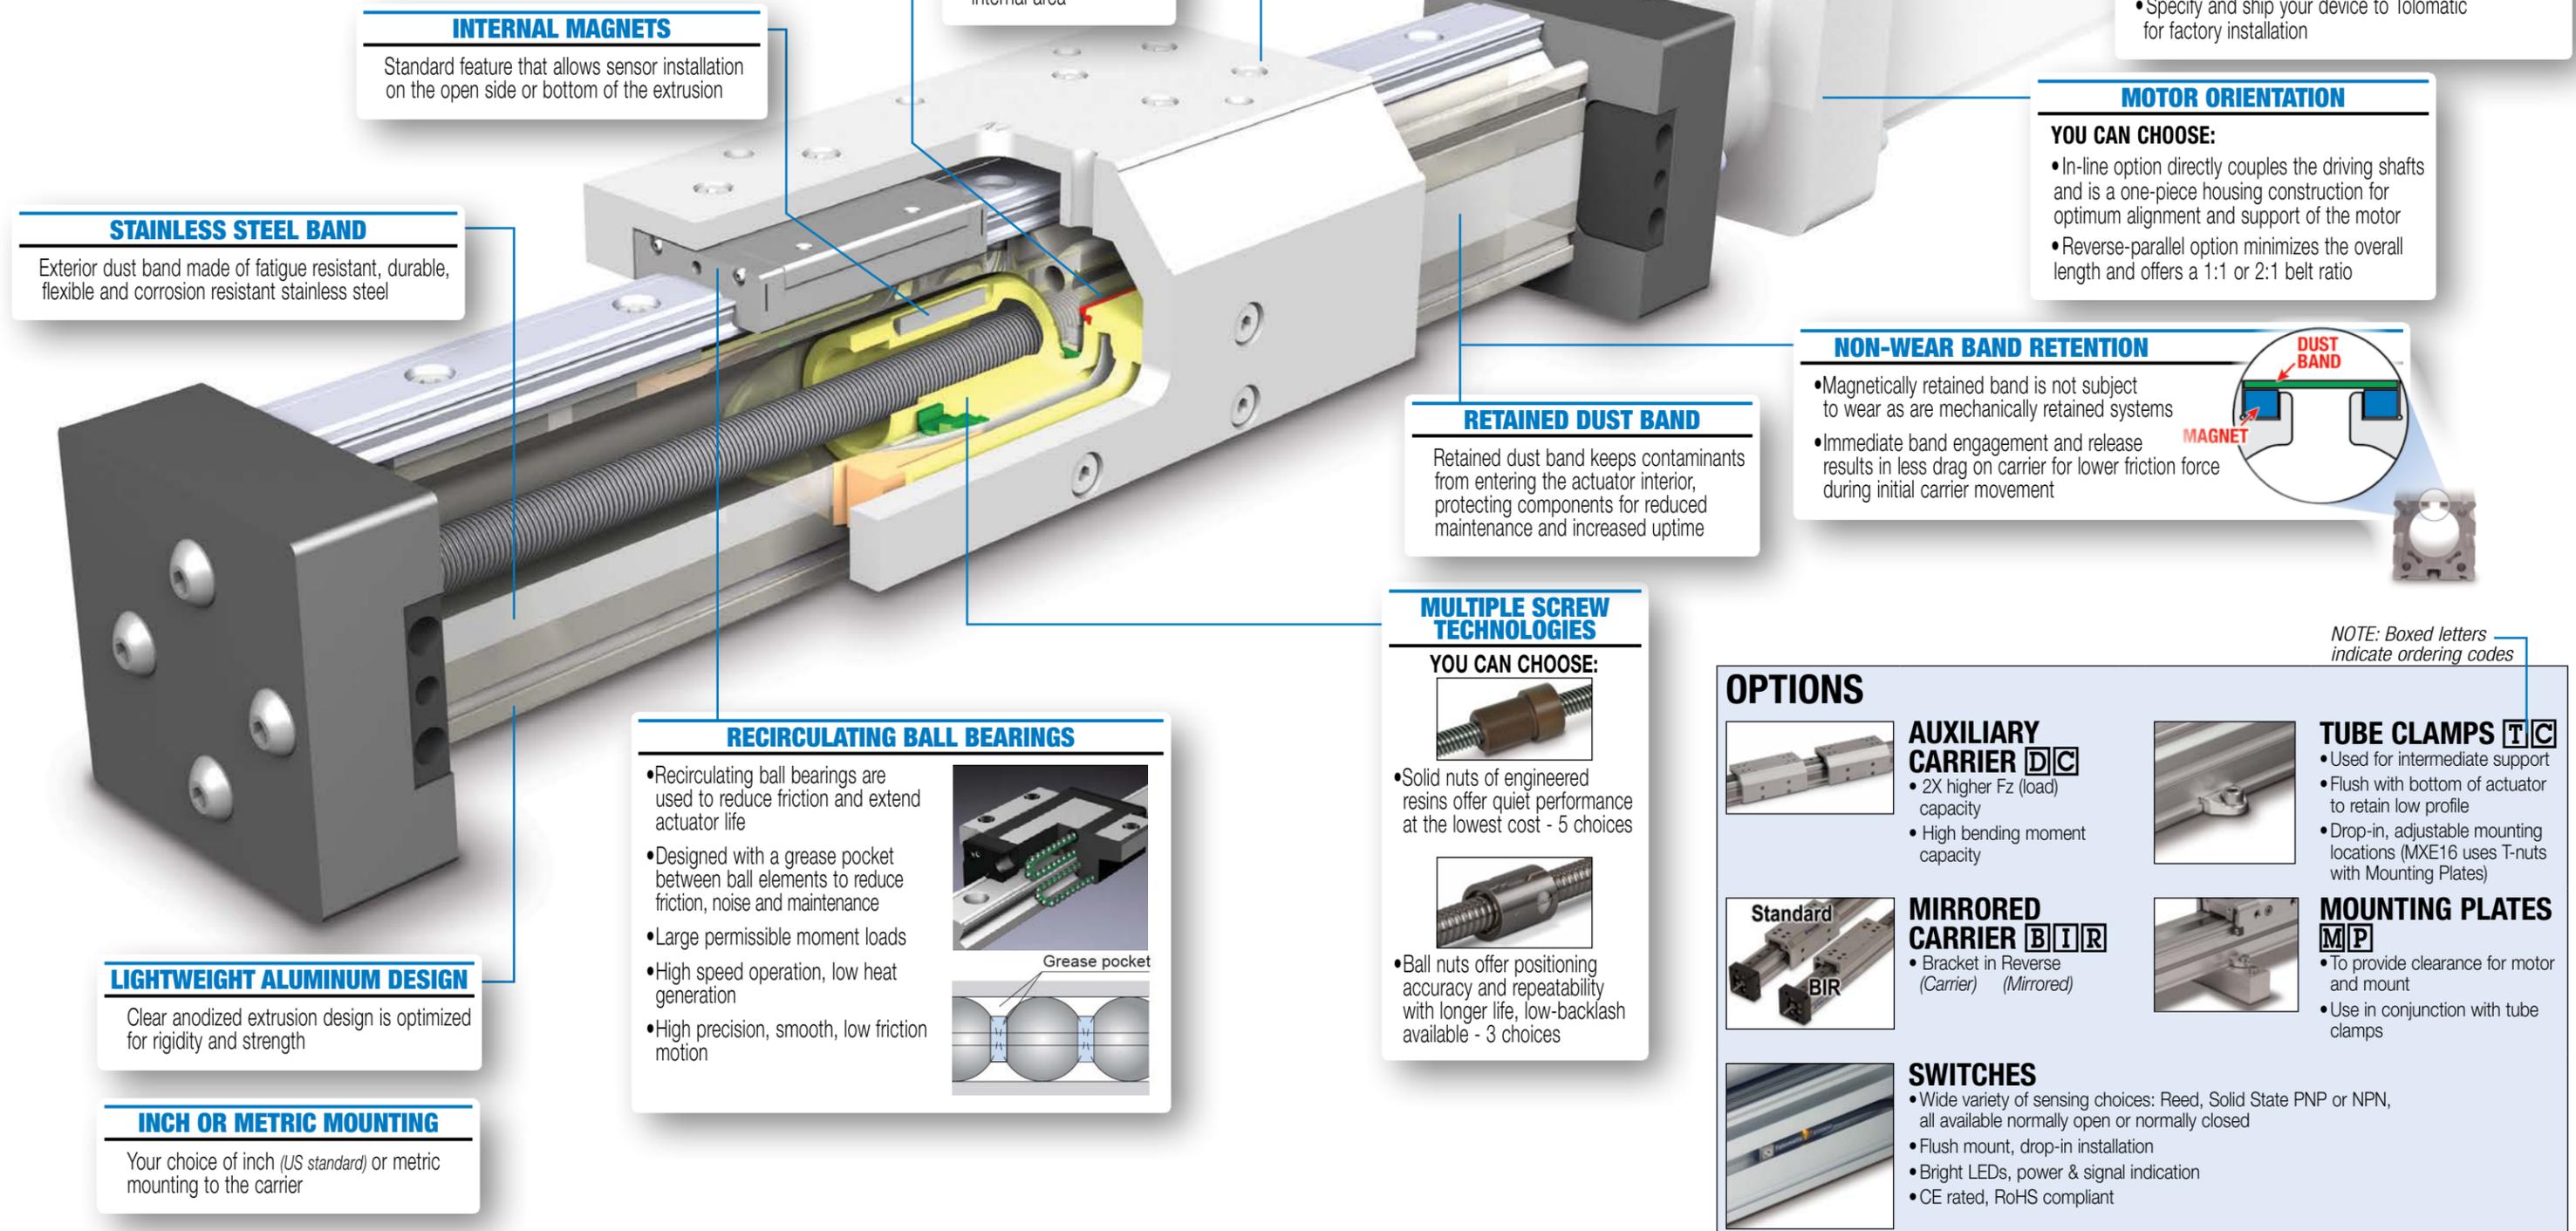

## ENDURANCE TECHNOLOGY<sup>SM</sup>

A Tolomatic Design Principle

Endurance Technology features are designed for maximum durability to provide extended service life.

The MXE-P rodless electric screw-drive actuator is designed for applications requiring moderate to heavy load carrying and guidance. The MXE-P actuator features a profiled rail system with recirculating ball linear guides for optimal performance. Built-to-order in stroke lengths up to 3.4m (134").

**Tolomatic**... MAXIMUM DURABILITY  
EXCELLENCE IN MOTION

### INTERNAL MAGNETS

Standard feature that allows sensor installation on the open side or bottom of the extrusion

### DUST WIPER

Formed end cap and side dust wipers keep contaminants from entering the actuator's internal area

### LOW CARRIER HEIGHT

- Reduces overall actuator envelope
- Large mounting pattern for excellent load stability

### YOUR MOTOR HERE

#### YOU CAN CHOOSE:

- Motor or gearbox supplied and installed by Tolomatic
- Specify the device to be installed and actuator ships with proper mounting hardware - MXE is a "Your Motor Here" actuator for easy in-line motor installation. Check our website ([www.tolomatic.com/ymh](http://www.tolomatic.com/ymh)) for complete YMH information
- Specify and ship your device to Tolomatic for factory installation

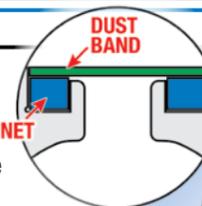

### MOTOR ORIENTATION

#### YOU CAN CHOOSE:

- In-line option directly couples the driving shafts and is a one-piece housing construction for optimum alignment and support of the motor
- Reverse-parallel option minimizes the overall length and offers a 1:1 or 2:1 belt ratio

### NON-WEAR BAND RETENTION

- Magnetically retained band is not subject to wear as are mechanically retained systems
- Immediate band engagement and release results in less drag on carrier for lower friction force during initial carrier movement

### RETAINED DUST BAND

Retained dust band keeps contaminants from entering the actuator interior, protecting components for reduced maintenance and increased uptime

### STAINLESS STEEL BAND

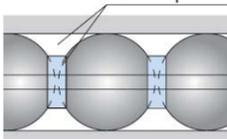

Exterior dust band made of fatigue resistant, durable, flexible and corrosion resistant stainless steel

### RECIRCULATING BALL BEARINGS

- Recirculating ball bearings are used to reduce friction and extend actuator life
- Designed with a grease pocket between ball elements to reduce friction, noise and maintenance
- Large permissible moment loads
- High speed operation, low heat generation
- High precision, smooth, low friction motion

Grease pocket

### MULTIPLE SCREW TECHNOLOGIES

#### YOU CAN CHOOSE:

- Solid nuts of engineered resins offer quiet performance at the lowest cost - 5 choices
- Ball nuts offer positioning accuracy and repeatability with longer life, low-backlash available - 3 choices

## OPTIONS

### AUXILIARY CARRIER **D****C**

- 2X higher Fz (load) capacity
- High bending moment capacity

### TUBE CLAMPS **T****C**

- Used for intermediate support
- Flush with bottom of actuator to retain low profile
- Drop-in, adjustable mounting locations (MXE16 uses T-nuts with Mounting Plates)

### MIRRORED CARRIER **B****I****R**

- Bracket in Reverse (Carrier) (Mirrored)

### MOUNTING PLATES **M****P**

- To provide clearance for motor and mount
- Use in conjunction with tube clamps

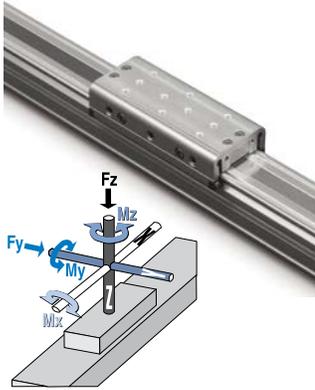

### SWITCHES

- Wide variety of sensing choices: Reed, Solid State PNP or NPN, all available normally open or normally closed
- Flush mount, drop-in installation
- Bright LEDs, power & signal indication
- CE rated, RoHS compliant

NOTE: Boxed letters indicate ordering codes

# S SOLID BEARING MOMENT AND LOAD CAPACITY

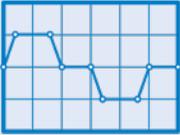

## STANDARD CARRIER

SIZE	MAXIMUM BENDING MOMENTS			MAX. LOAD
	Mx	My	Mz	Fz
	N-m	N-m	N-m	N
16	2.5	2.1	2.8	156
25	6.8	12.4	3.8	311

50	315	1,155	341	315
63	585	2,340	520	520

**⚠ The above ratings are the maximum values for shock-free, vibration-free operation in a typical industrial environment, which must not be exceeded even in dynamic operation. Contact Tolomatic for assistance in selecting the most appropriate actuator for your application.**

[sizeit.tolomatic.com](http://sizeit.tolomatic.com) for fast, accurate actuator selection

[sizeit.tolomatic.com](http://sizeit.tolomatic.com) for fast, accurate actuator selection or call Tolomatic (1-800-328-2174) with application information. We will provide any assistance needed to determine the proper MXE screw-driven actuator.

[tolomatic.com/ask](http://tolomatic.com/ask) Technical support before and after purchase

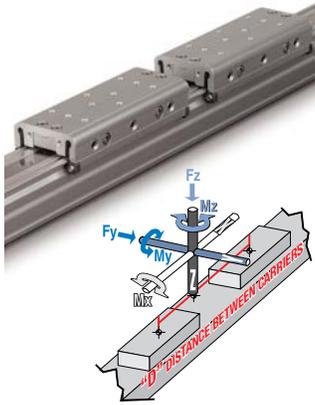

The moment and load capacity of the actuator's bearing system is based on an L10 life of 5,000,000 linear meters of travel. Life of the actuator will vary for each application depending on the combined loads, motion parameters and operating conditions. The load factor ( $L_F$ ) for each application must not exceed a value of 1 (as calculated below). Exceeding a load factor of 1 will diminish the actuator's rated life.

$$L_F = \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} + \frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} \leq 1$$

With combined loads,  $L_F$  must not exceed the value 1.

# S SOLID BEARING MOMENT AND LOAD CAPACITY

## DC AUXILIARY CARRIER

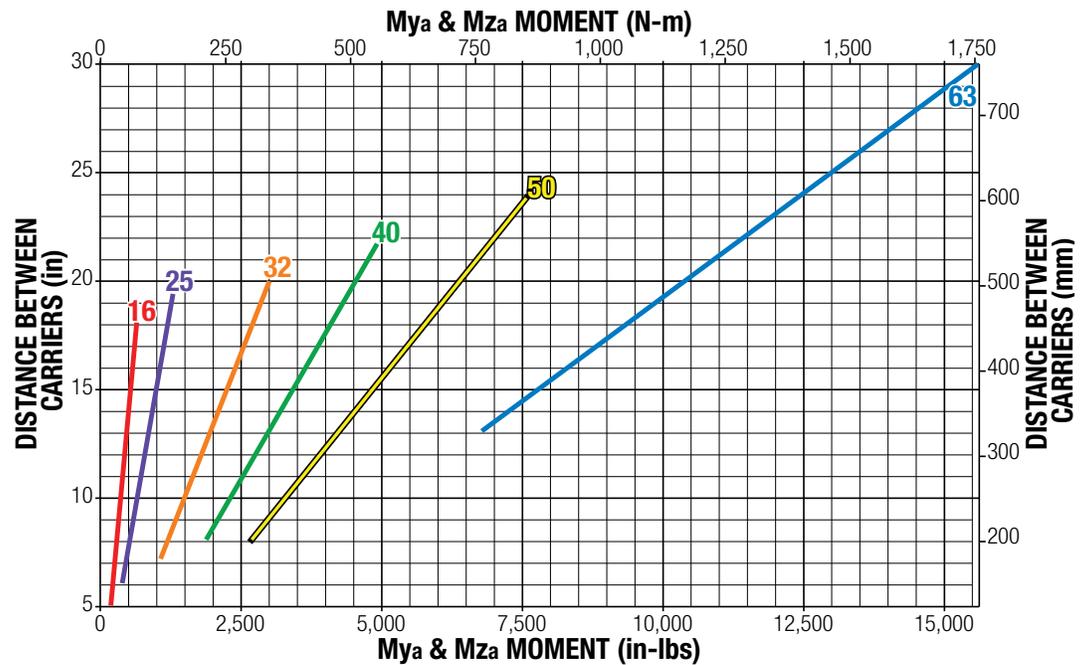

AUXILIARY CARRIER BENDING MOMENTS WITH INCREASED "D" DISTANCE BETWEEN CARRIERS

SIZE	"D" MIN.	MAXIMUM BENDING MOMENTS*			MAX. LOAD
		Mxa	Mya	Mza	
		N-m	N-m	N-m	
16	127	5.0	19.8	19.8	311
25	152	13.6	47.5	47.5	623
32	178	22.6	119	119	1,334
40	216	62.1	216	216	2,002
50	218	71.2	306	306	2,802
63	330	132	764	764	4,626

SIZE	"D" MIN.	MAXIMUM BENDING MOMENTS*			MAX. LOAD
		Mxa	Mya	Mza	
		in-lbs	in-lbs	in-lbs	
16	5.0	44	175	175	70
25	6.0	120	420	420	140
32	7.0	200	1,050	1,050	300
40	8.5	550	1,913	1,913	450
50	8.6	630	2,709	2,709	630
63	13.0	1,170	6,760	6,760	1,040

\*At minimum "D" distance see graph below for complete information

Ratings were calculated with the following conditions:

- 1.) Coupling between carriers is rigid.
- 2.) Load is equally distributed between carriers.
- 3.) Coupling device applies no misalignment loads to carriers.

**⚠** The above ratings are the maximum values for shock-free, vibration-free operation in a typical industrial environment, which must not be exceeded even in dynamic operation. Contact Tolomatic for assistance in selecting the most appropriate actuator for your application.

With combined loads,  $L_f$  must not exceed the value 1.

$$L_f = \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} + \frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} \leq 1$$

# PROFILED RAIL MOMENT AND LOAD CAPACITY

⚠ Mating surface of mounted component must maintain a flatness of at least .0015" [0.040 mm]

## STANDARD CARRIER

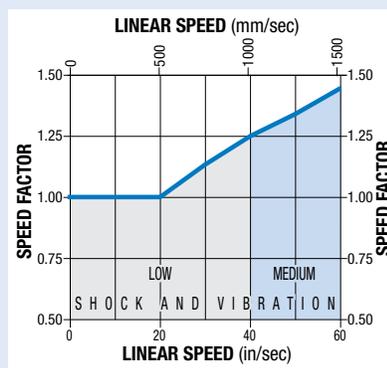

SIZE	MAXIMUM BENDING MOMENTS			MAXIMUM LOAD	
	Mx	My	Mz	Fy	Fz
	N-m	N-m	N-m	N	N
16	4.5	38.3	38.3	966	966
25	14.3	56.7	42.6	1,996	1,996
32	25.6	152	152	2,531	2,531
40	68.2	216	216	3,274	3,274
50	91.7	394	394	4,510	4,510
63	115	603	603	5,745	5,745

SIZE	MAXIMUM BENDING MOMENTS			MAXIMUM LOAD	
	Mx	My	Mz	Fy	Fz
	in-lbs	in-lbs	in-lbs	lbf	lbf
16	39	339	339	217	217
25	126	502	377	449	449
32	226	1,344	1,344	569	569
40	604	1,913	1,913	736	736
50	811	3,483	3,483	1,014	1,014
63	1,019	5,339	5,339	1,292	1,292

⚠ The above ratings are the maximum values for shock-free, vibration-free operation in a typical industrial environment, which must not be exceeded even in dynamic operation. Contact Tolomatic for assistance in selecting the most appropriate actuator for your application.

## SPEED FACTOR

FOR APPLICATIONS WITH HIGH SPEED OR SIGNIFICANT SHOCK AND VIBRATION: Calculated values of loads and bending moments must be increased by speed factor from the graph at right to obtain full rated life of profiled rail bearing system.

The moment and load capacity of the actuator's bearing system is based on an L10 life of 5,000,000 linear meters of travel. Life of the actuator will vary for each application depending on the combined loads, motion parameters and operating conditions. The load factor ( $L_f$ ) for each application must not exceed a value of 1 (as calculated below). Exceeding a load factor of 1 will diminish the actuator's rated life.

$$L_f = \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} + \frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} \leq 1$$

With combined loads,  $L_f$  must not exceed the value 1.

## PROFILED RAIL LUBRICATION

Proper lubrication of profiled rail bearing system is essential for normal operation and achievement of full rated life of MXE-P actuators. Lubrication should be performed at intervals of 101,600 meters of travel or once every year, whichever occurs first. However, operating conditions such as high speed or significant shock and vibration may require more frequent lubrication. Please consult Tolomatic for recommendations.

### Recommended grease types:

1. Refined mineral oil-based multi-purpose grease with lithium thickening agent.
2. High-grade synthetic oil-based grease with urea thickening agent.

## S SOLID BEARING

## P PROFILED RAIL BEARING

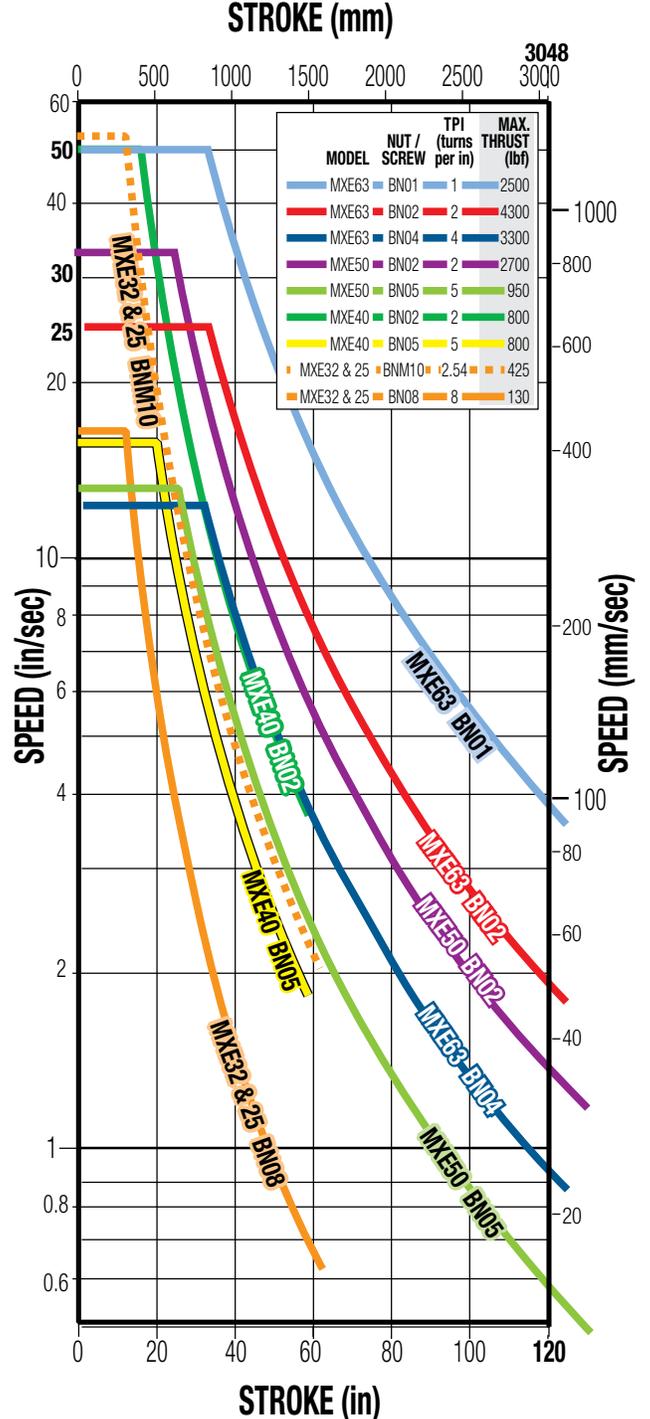

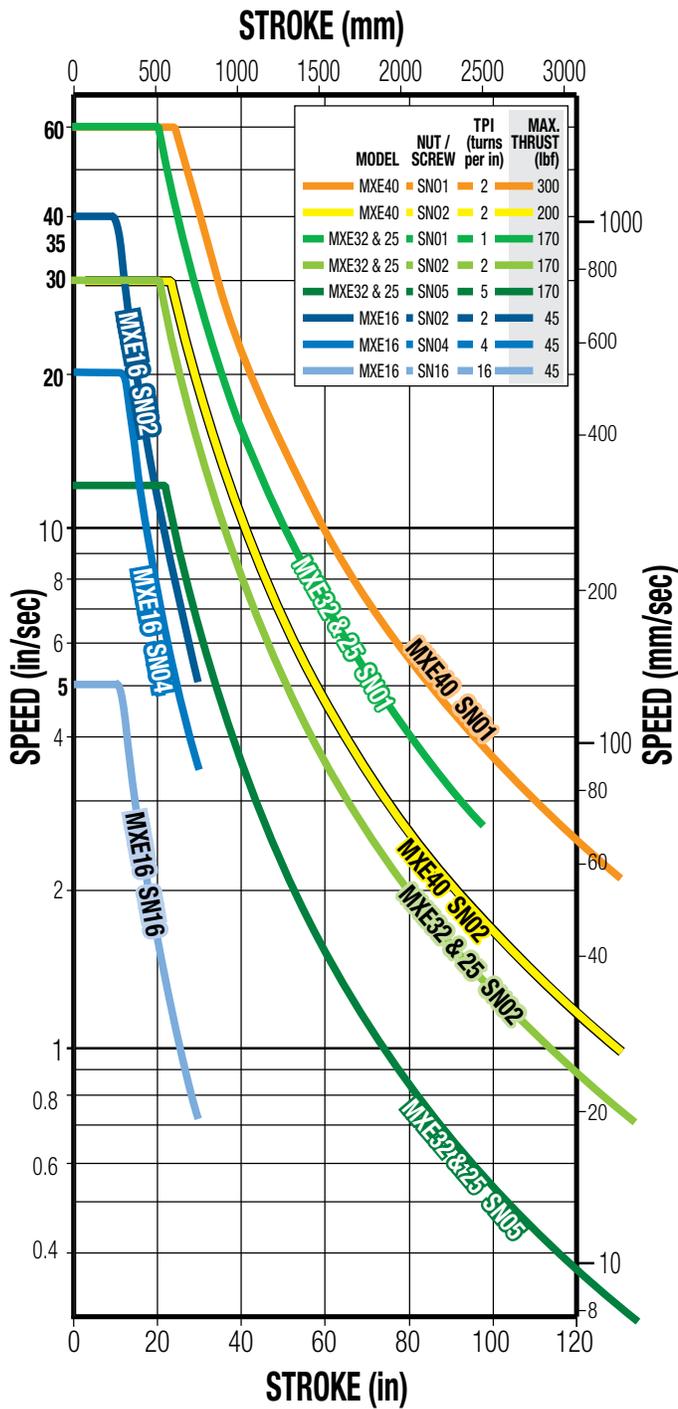

# SCREW CRITICAL SPEED CAPACITIES

## MXE ACME SCREW CRITICAL SPEED

## MXE BALL SCREW CRITICAL SPEED

**!** \* Maximum thrust is the maximum continuous dynamic thrust subject to Thrust x Velocity limitation.

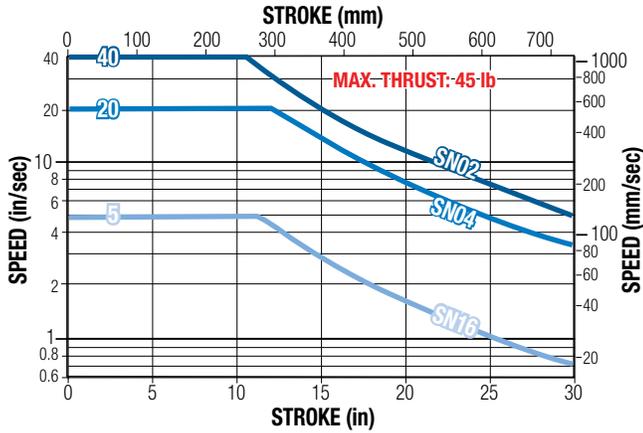

Dotted lines represent maximum stroke for screw selections.

For Screw PV limits, refer to the individual charts on the following pages for each actuator body size.

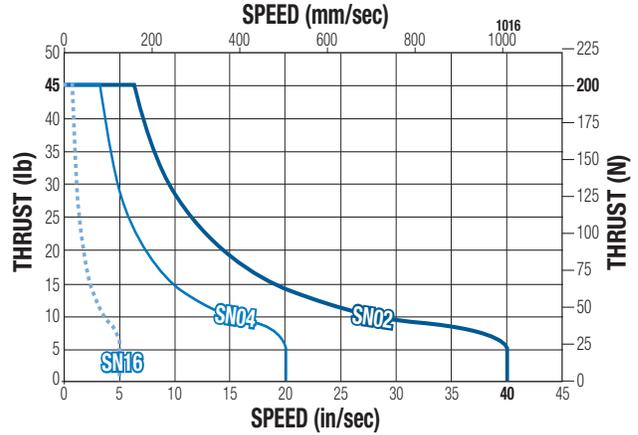

SCREW CODE	DESCRIPTION
SN	Solid Nut
BN	Ball Nut
BNL	Low Backlash Ball Nut

# MXE16, MXE25, MXE32, MXE40 ACME SCREW CRITICAL SPEED AND PV LIMITS

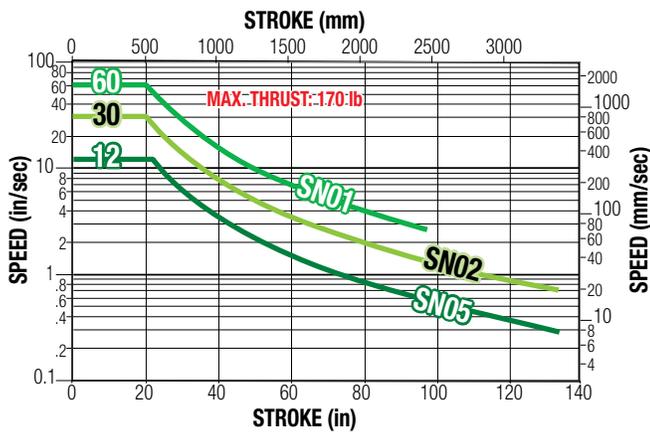

## MXE16: Critical Speed: 0.250" ACME

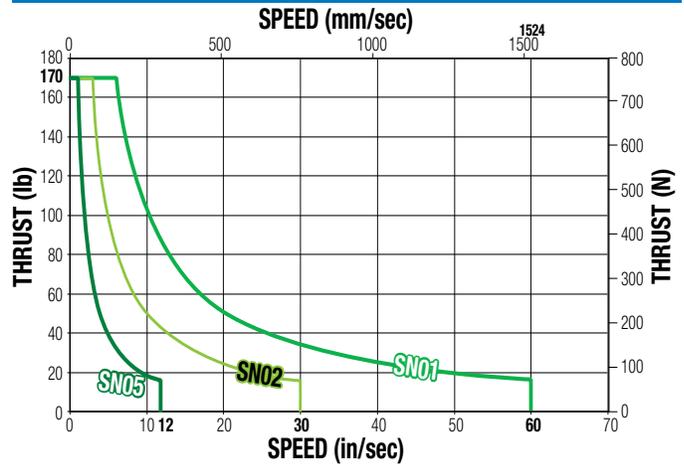

## MXE16: PV Limits: Acme Screws

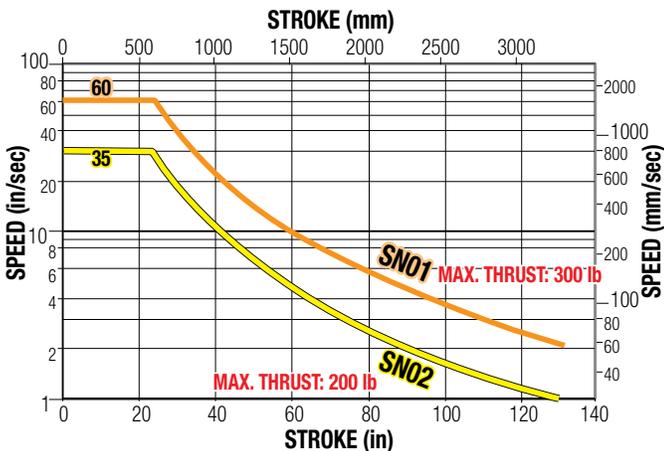

## MXE25, MXE32: Critical Speed: 0.5" ACME

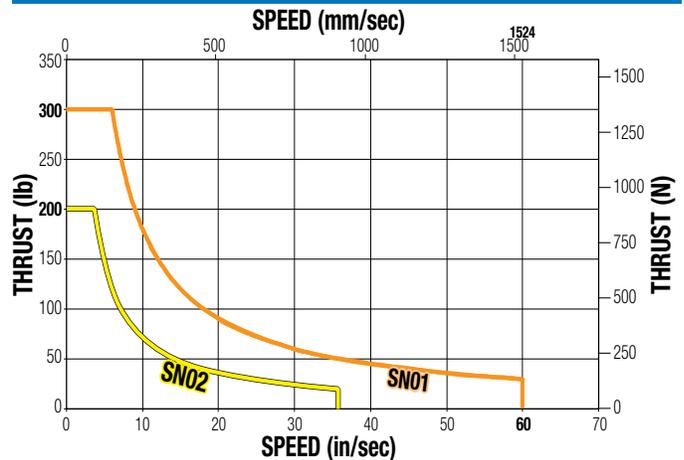

## MXE25, MXE32: PV Limits: Acme Screws

## MXE40: Critical Speed: 0.625" & .75" ACME

## MXE40: PV Limits: Acme Screws

\* Maximum thrust is the maximum continuous dynamic thrust subject to Thrust x Velocity Limitation.

SN = Solid Nut

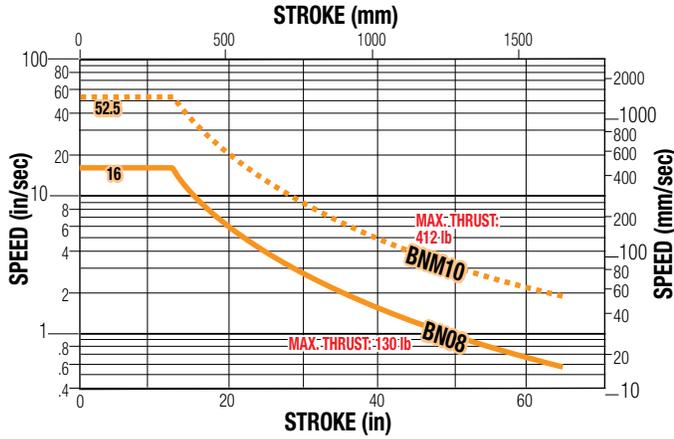

**PV LIMITS:** Any material which carries a sliding load is limited by heat buildup. The factors that affect heat generation rate in an application are the pressure on the nut in pounds per square inch and the surface velocity in feet per minute. The product of these factors provides a measure of the severity of an application.

$$\left( \frac{P}{\text{Max. Thrust Rating}} \right) \times \left( \frac{V}{\text{Max. Speed Rating}} \right) \leq 0.1$$

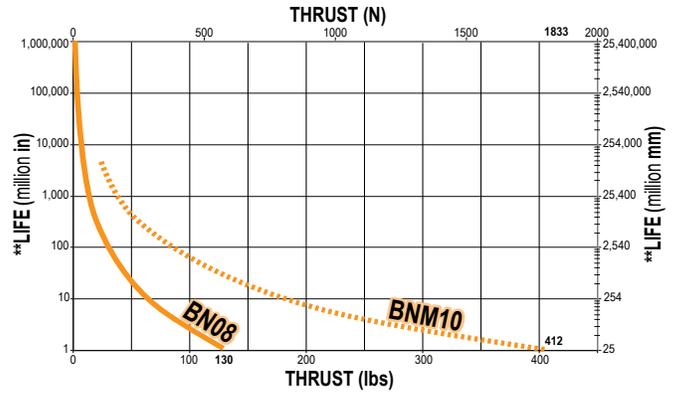

# MXE25, MXE32, MXE40 BALL SCREW CRITICAL SPEED AND THEORETICAL LIFE

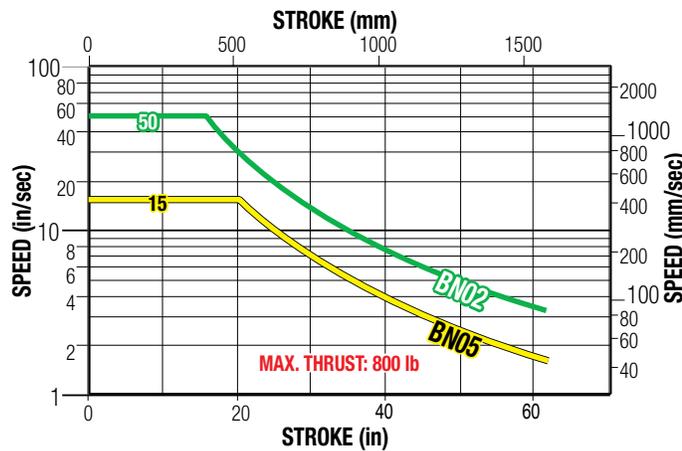

**MXE25, MXE32: Critical Speed: Ball Screw**

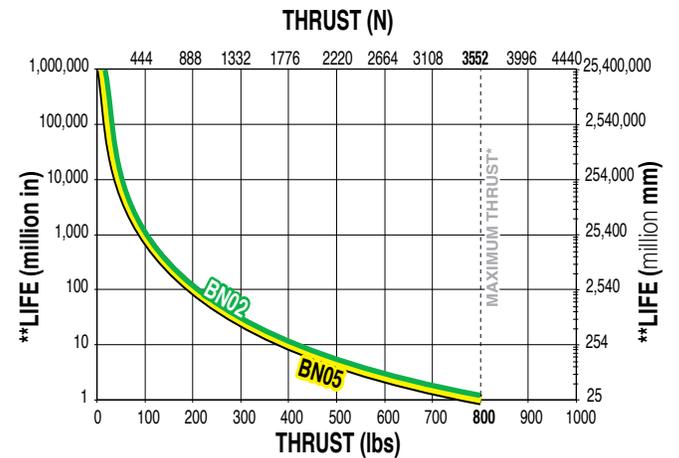

**MXE25, MXE32: Life: Ball Screw**

**MXE40: Critical Speed: Ball Screw**

**MXE40: Life: Ball Screws**

**BN = Ball Nut**

**▲** \*Maximum thrust reflects 90% reliability for 25 million linear millimeters of travel.

\*\*Life indicates theoretical maximum life of screw only, under ideal conditions and does not indicate expected life of actuator.

# SWITCHES

## SPECIFICATIONS

MX products offer a wide range of sensing choices. There are 12 switch choices: reed, solid state PNP (sourcing) or solid state NPN (sinking); in normally open or normally closed; with flying leads or quick-disconnect.

Commonly used for end-of-stroke positioning, these switches allow drop-in installation anywhere along the entire actuator length. The one-piece design includes the retained fastening hardware and is designed for any open side or bottom slot on the MX. The internal piston magnet is a standard feature, therefore these switches can be installed in the field at any time.

Switches are used to send digital signals to PLC (programmable logic controller), TTL, CMOS circuit or other controller device. Switches contain reverse polarity protection. Solid state QD cables are shielded; shield should be terminated at flying lead end.

All switches are CE rated and are RoHS compliant. Switches feature bright red or yellow LED signal indicators; solid state switches also have green LED power indicators.

	Order Code	Lead	Switching Logic	Power LED	Signal LED	Operating Voltage	**Power Rating (Watts)	Switching Current (mA max.)	Current Consumption	Voltage Drop	Leakage Current	Temp. Range	Shock / Vibration

	<b>H</b> <b>K</b>	QD*											

\*QD = Quick-disconnect      Enclosure classification IEC 529 IP67 (NEMA 6)      CABLES: Robotic grade, oil resistant polyurethane jacket, PVC insulation

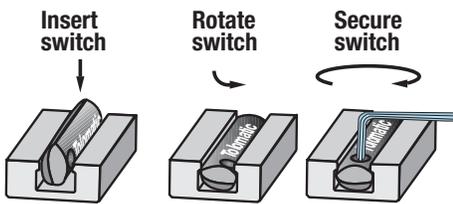

**⚠** \*\*WARNING: Do not exceed power rating (Watt = Voltage x Amperage). Permanent damage to sensor will occur.

# SWITCHES

## WIRING DIAGRAMS

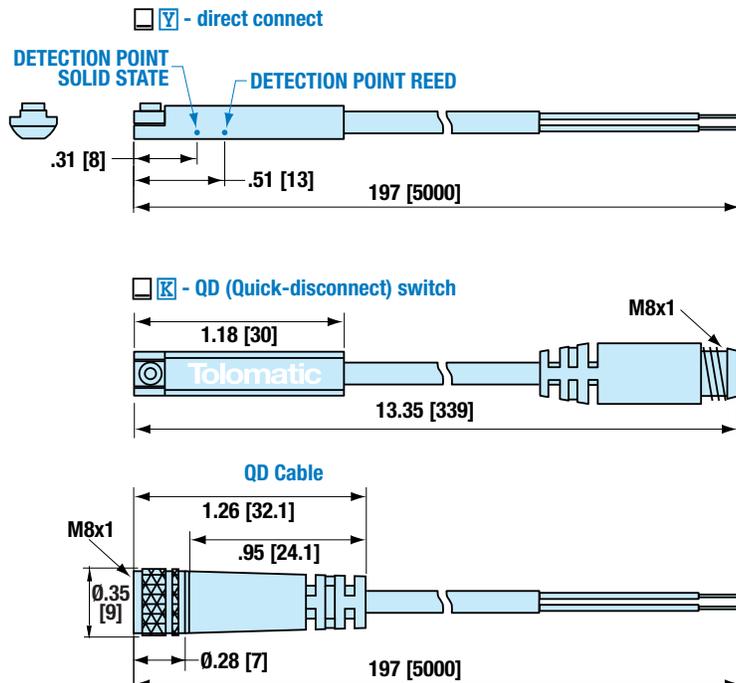

## SWITCH INSTALLATION AND REPLACEMENT

Place switch in side groove on tube at desired location with "Tolomatic" facing outward. While applying light pressure to the switch, rotate the switch halfway into the groove. Maintaining light pressure, rotate the switch in the opposite direction until it is fully inside the groove with "Tolomatic" visible. Re-position the switch to the exact location and lock the switch securely into place by tightening the screw on the switch.

sizeit.tolomatic.com for fast, accurate actuator selection

USE THE TOLOMATIC SIZING AND SELECTION SOFTWARE AVAILABLE ONLINE AT [www.tolomatic.com](http://www.tolomatic.com) OR... CALL TOLOMATIC AT 1-800-328-2174.

We will provide any assistance needed to determine the proper actuator for the job.

FAX 1-763-478-8080

EMAIL [help@tolomatic.com](mailto:help@tolomatic.com)

# SELECTION GUIDELINES

The process of selecting a load bearing actuator for a given application can be complex. It is highly recommended that you contact Tolomatic or a Tolomatic Distributor for assistance in selecting the best actuator for your application. The following overview of the selection guidelines are for educational purposes only.

## 1 CHOOSE ACTUATOR BEARING STYLE & SIZE

Choose an actuator that has the thrust, speed and moment load capacity to move the load. Use the Speed/Stroke graph (page MXE\_17) for the screw and the Moment and Load Capacity tables (pg. MXE\_8-11) for the actuator.

## 2 COMPARE LOAD TO MAXIMUM LOAD CAPACITIES

Calculate the application load (combination of load mass and forces applied to the carrier) and application bending moments (sum of all moments  $M_x$ ,  $M_y$ , and  $M_z$  applied to the carrier). Be sure to evaluate the magnitude of dynamic inertia moments. When a rigidly attached load mass is accelerated or decelerated, its inertia induces bending moments on the carrier. Careful attention to how the load is decelerated at the end of the stroke is required for extended actuator performance and application safety. If either load or any of your moments exceed figures indicated in the Moment and Load Capacity tables (pg. MXE\_8-11) for the actuator consider:

- 1) Higher capacity bearing style i.e. **S** Solid to **P** Profiled Rail
- 2) A larger actuator size
- 3) Auxiliary carrier
- 4) External guide system

## 3 CALCULATE LOAD FACTOR LF

For loads with a center of gravity offset from the carrier account for both applied (static) and dynamic loads. The load factor (LF) must not exceed the value of 1.

$$L_f = \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} + \frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} \leq 1$$

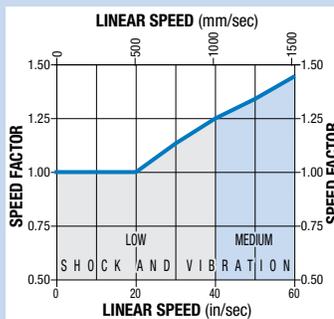

If  $L_f$  does exceed the value of 1, consider the four choices listed in step #2.

## 4 ESTABLISH YOUR MOTION PROFILE AND CALCULATE ACCELERATION RATE

Using the application stroke length and maximum carrier velocity (or time to complete the linear motion), establish the motion profile. Select either triangular (accel-decel) or trapezoidal (accel-constant speed-decel) profile. Now calculate the maximum acceleration and deceleration rates of the move. Acceleration/deceleration should not exceed critical speed (page MXE\_17) for the

### SPEED FACTOR

FOR APPLICATIONS WITH HIGH SPEED OR SIGNIFICANT SHOCK AND VIBRATION: Calculated values of loads and bending moments must be increased by speed factor from the graph below to obtain full rated life of profiled rail bearing system.

screw/nut combination chosen. Also, do not exceed safe rates of dynamic inertia moments determined in step #3.

## 5 SELECT THE LEAD SCREW

Based on the application requirements for accuracy, backlash, quiet operation, life, etc. select the appropriate lead screw type (Acme screw with a solid nut or ball screw with a standard or anti-backlash nut) and the pitch (lead). For additional information on screw selection, consult "Which Screw? Picking the Right Technology" (#9900-4644) available at [www.tolomatic.com](http://www.tolomatic.com).

## 6 SELECT MOTOR (GEARHEAD IF NECESSARY) AND DRIVE

To help select a motor and drive, use the sizing equations located in the Engineering Resources section of the Tolomatic Electric Products Catalog (#3600-4609) to calculate the application thrust and torque requirements. Refer to Motor sections to determine the motor and drive.

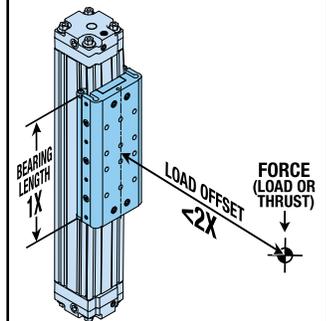

## 7 DETERMINE TUBE CLAMP/MOUNTING PLATE REQUIREMENTS

- Consult the Tube Clamp Requirements graph for the model selected (page MXE\_16)
- Cross reference the application load and maximum distance between supports
- Select the appropriate number of tube clamps, and mounting plates if required for motor and adapter clearance.

# 8 CONSIDER OPTIONS

- Choose metric or inch (US standard) load mounting. (When ordering use **S****K** for inch and **S****M** for metric)
- Switches - Reed, Solid State PNP or NPN, all available normally open or normally closed
- **F****L** Floating mount bracket - used when lack of parallelism occurs between the actuator and an externally guided and supported load (available for **S** Solid bearing style MXE actuators)

### **S** SOLID BEARING 2:1 RULE

For applications using **S** solid bearings, binding or interrupted motion may occur if the load offset is equal to or greater than twice the bearing length (1X). *LOAD OFFSET* is defined as: the distance from the applied force (or the load center of gravity) to the centerline of the carrier.

If the load offset cannot be changed consider:

- 1.) Higher capacity bearing style, i.e. **S** to **P**
- 2.) Larger Bore Cylinder
- 3.) Auxiliary Carrier
- 4.) Add External Guides

# ADJUSTMENT PROCEDURES

## **S** SOLID BEARING CARRIER ADJUSTMENT

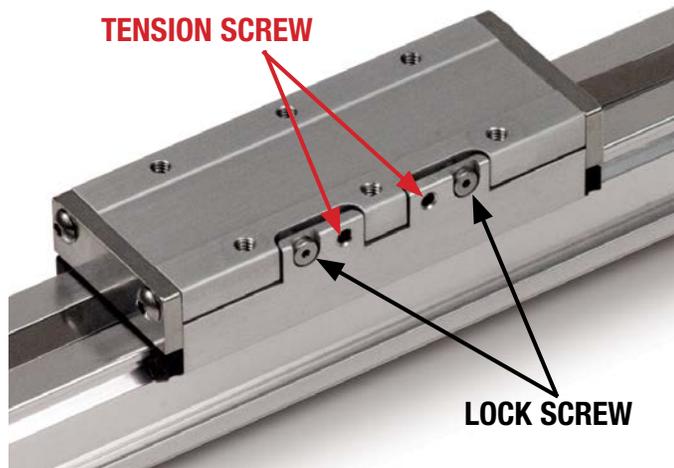

### 16 Series

**NOTE:** MXE16S requires a different carrier adjustment procedure, see below.

Tools Required:

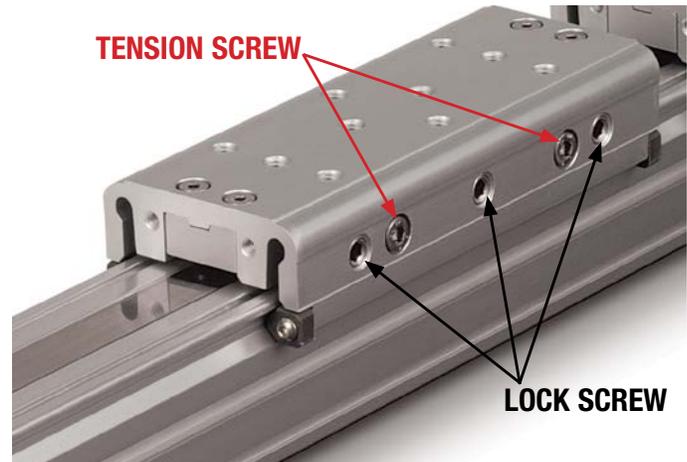

Inch Models: 1/16 inch and 2.5mm Hex Wrench (Key)  
Metric Models: 2 and 2.5 mm Hex Wrench (Key)

1. Loosen endplate screws on both ends of the carrier.
2. Fully loosen all tension and lock screws. They do not need to be removed, just fully loosened.

### 25, 32, 40, 50, 63 Series

The **S** solid bearing carrier will provide for maximum life when properly adjusted. The carrier design contains both tension and lock screws. The tension screws control the amount of pressure placed on the carrier bearings. The lock screws lock the tension screws in place and provide fine adjustment of the carrier bearings. The number of tension and lock screws will vary depending on the bore size of the actuator.

3. Tighten tension screws by turning them clockwise until the carrier is just tight enough so that no side-to-side rocking motion is present and it can easily be moved by hand over the entire stroke length with no hesitation. Very little torque on the screws is required to obtain this condition.

Note: The Tension Screws are the small set screw style fastener. The Lock Screws are the larger, low head, hex drive screws.

4. Tighten lock screws by turning them clockwise until tight. The carrier should feel snug in relation to the tube, with no side-to-side rocking motion present. If the carrier becomes too loose, loosen the lock screws, tighten the tension screws and then retighten the lock screws.
5. Once ideal carrier tension is achieved, fully tighten end plate screws on both ends of the carrier.

1. Fully loosen all tension and lock screws. They do not need to be removed, just fully loosened.
2. Tighten tension screws on both sides of carrier roughly 1/8 to 1/4 turn clockwise past where the screw starts to feel snug. The carrier should be very difficult or impossible to move by hand.
3. Next, adjust the lock screws on both sides of the carrier roughly 1/8 to 1/4 turn clockwise past where the screw starts to engage.
4. Ideal carrier tension is achieved when the carrier feels snug in relation to the tube. No rocking motion should be present. The carrier should be loose enough to be moved by hand over the entire length of the actuator. If after this process the carrier has become too loose, equally adjust all of the lock screws with a slight 1/32 turn counter-clockwise. A carrier that is adjusted too tight will increase the breakaway pressure required for motion; in extreme cases no motion will occur when air is applied.

During the application duty cycle, this process may need to be repeated. Keeping the carrier properly adjusted will prolong the life of the **S** solid bearing system.

#### Allen wrench sizes for carrier adjustment, Solid bearing actuators

	Tension Screw		Lock Screw	
	mm	in	mm	in
<b>16</b>	2	1/16	2	1/16
<b>25</b>	4	5/32	3	1/8
<b>32</b>	4	5/32	2	3/32
<b>40</b>	4	5/32	3	1/8
<b>50</b>	4	3/16	2.5	3/32
<b>63</b>	5	1/4	5	3/16

Check out our **MX--S** carrier adjustment video on the web  
<https://youtu.be/LVWPg2gfy0A>

**sizeit.tolomatic.com** for fast, accurate actuator selection or call Tolomatic (1-800-328-2174) with application information. We will provide any assistance needed to determine the proper MXE screw-driven actuator.

# SERVICE PARTS ORDERING

## REPAIR KITS

Repair kit includes: dust band, end caps, [Also for **S** style: bearings and bearing caps]

The part number for a repair kit begins with RK followed by model, actuator size, bearing type, and stroke length (**SK** = inch/US Standard, **SM** = metric) (NOTE: If unit has an auxiliary carrier also include DC and distance between carrier centers)

## SWITCHES

### TO ORDER SERVICE PARTS SWITCHES:

Switches for MXE include retained mounting hardware and female Quick-disconnect coupler (if applicable). Switches are the same for all actuator sizes and bearing styles

Code	Lead	Normally	Sensor Type
<b>R</b> <b>Y</b>	5m (197 in)	Open	Reed
<b>R</b> <b>K</b>	Quick-disconnect		
<b>N</b> <b>Y</b>	5m (197 in)	Closed	Reed
<b>N</b> <b>K</b>	Quick-disconnect		
<b>T</b> <b>Y</b>	5m (197 in)	Open	Solid State PNP
<b>T</b> <b>K</b>	Quick-disconnect		
<b>K</b> <b>Y</b>	5m (197 in)	Open	Solid State NPN
<b>K</b> <b>K</b>	Quick-disconnect		
<b>P</b> <b>Y</b>	5m (197 in)	Closed	Solid State PNP
<b>P</b> <b>K</b>	Quick-disconnect		
<b>H</b> <b>Y</b>	5m (197 in)	Closed	Solid State NPN
<b>H</b> <b>K</b>	Quick-disconnect		

To order switch kit use configuration code for switch preceded by SW and actuator code.

EXAMPLE: **SWMXE25KK**

The example is for Solid State NPN, Normally Open Switch with Quick-disconnect couplers. Each switch kit is complete with Bracket, Set Screw, Switch and mating QD cable. Note that the bracket/switch size is common and may be used on any size MXE.

**FOOD GRADE LUBRICATION**

**LUB\_** Grease, Food/Drug

**MOUNTING**

**TC\_** Tube Clamps, enter number of pairs  
**FL** Floating Mount  
**MP\_** Mounting Plates, & quantity

NOTE: Floating Mount is not available with "P" Profiled Rail

NOTE: Brakes mounted on reverse parallel motor mounts (especially in vertically positioned actuators) will not prevent back driving of the screw and the load falling under gravity in the event of a timing belt failure. An inline motor mount with a fail-safe brake mounted directly to the actuator shaft or a special geared or thru-shaft reverse parallel construction should be considered if a brake is required in a safety critical application. Contact Tolomatic for alternate reverse parallel brake mounting options.

Gearheads may be used with reverse parallel motor mounts. However, the torque on the belt and internal RP components must remain below the capabilities of the assembly to prevent belt slipping or premature failure. Contact Tolomatic for additional information if required.

⚠ Not all codes listed are compatible with all options.
